*Seed Growers*

Dear Fellow Gardeners:

Your hobby or your business is tilling the soil. People everywhere have come to realize that this is the most essential of all human endeavors. But even now it may be impossible to produce enough food to prevent hunger in many parts of the world.

I hope that you will grow as many vegetables as you can this year.

We have been doing everything we can to help you to grow better vegetables. The hybrids we have created in the past few years will be of great benefit to every vegetable grower. They are of the best quality and produce more on every plant and on every square foot of ground—and they are more resistant to disease. Then, too, there are listed in this seed catalog many other new varieties of improved vigor and quality.

*Flowers have their value always*, either in war or in peace, for they are morale builders.

This year we offer you a larger selection including a number of new flowers of unusual beauty—the new Double Snapdragons on the front cover, the new Tetra Red Phlox, new Alldouble Petunias, new Sweet Peas, new Marigolds, and many others.

When you plant Burpee seeds you can rest assured that you are starting with the best and with proper care and favorable weather conditions, you should have a most successful garden.

Each year we look forward to supplying you with the best seeds that grow.

Faithfully yours,

*David Burpee*

President

Realization of the constant need for maintaining quality and improving it in the seeds that mean so much to the gardens of the world led to the establishment of Burpee's Seed Farms, where we can grow, breed, create, under our own supervision, just the kind of varieties that meet our ideals of highest quality.

Fordhook Seed Farms were established by W. Atlee Burpee at Doylestown, Pa., near Philadelphia, before the U. S. Department of Agriculture had any experiment stations.

All Burpee Seeds and Bulbs are produced where they grow most nearly to perfection. To be absolutely sure that such seeds and bulbs are the very best, thousands of trial plantings are made each year at our Fordhook and Floradale Farms, thus enabling us to see how the different varieties of flowers and vegetables grow under various climatic conditions. This testing out of seeds is one of the most exacting parts of our business.

Fordhook Farms have been famous as the most complete and largest trial grounds in the world. Here, too, many special strains of Burpee vegetables and flowers have been created and are being grown for seed. Some of them have been named for these farms,—Fordhook Bush Lima Bean, Fordhook Celery, Fordhook Hybrid Tomato, Fordhook Famous Cucumber, etc. All are well-known vegetables to gardeners everywhere as are other finest varieties first named and introduced by Burpee, such as Burpee's Stringless Green-Pod Bush Bean, Golden Bantam Sweet Corn, Blue Bantam Peas, Copenhagen Market Cabbage and many more. Today, many years after their introduction, they are still leaders and in great demand.

In addition to vegetables, Burpee experts have created many new flowers. We are proud of these achievements, which are testimonials to the progressive work accomplished at our Seed Farms,—all to better serve the needs of Burpee customers everywhere.

**BURPEE GUARANTEE** We guarantee the vitality and purity of Burpee's Seeds and Bulbs to the full amount of the purchase price. You can have your money back any time within a year if you are not satisfied with the results. Even with the highest quality seeds and bulbs, success in gardening depends largely upon cultivation, soil and weather conditions. Therefore, in no case shall W. Atlee Burpee Co. be liable for more than the amount actually paid us for seeds or bulbs. All goods are sold under this Burpee Guarantee.

# Burpee's FLORADALE FARMS

The first Spencer Sweet Pea was brought to America by W. Atlee Burpee and grown in California for seed production. For the further development of sweet peas, the largest selling annual at that time and which had long been a Burpee specialty, Floradale Farms were founded in the Lompoc Valley, Santa Barbara County.

Soon, other flowers were tried out at Floradale. Many produced seeds that were better than those grown elsewhere. Each year saw increased plantings—acres upon acres of beautiful sweet peas, petunias, marigolds, asters, zinnias, snapdragons, etc. No effort or expense is spared to produce the best seeds of the finest flowers and such vegetables as here produce strong, healthy seeds of the highest germination.

Breeding, selection and experimental work, as well as seed growing, are continually going on at Floradale. Our Testing Grounds comprise many acres each year and give us outstanding new varieties of vegetables and flowers. On this and the opposite page are a few pictures taken at our farms which we hope you will find interesting. Others appear throughout the book.

From Floradale we gave the world all marigolds with odorless foliage, all hybrid marigolds, many prize-winning marigolds of various types; outstanding petunias for size, shape and never-before-seen colors; largest of all zinnias; new colors and new plant growth in California poppies; yellow colored single and ruffled cosmos; gay gaillardias; extra-early asters; wonderful sweet peas; many, many more including the giant ruffled tetraploid snapdragons last year and, for this year, the first giant alldouble snapdragon ever grown from seed along with distinctive new petunias, marigolds, etc.

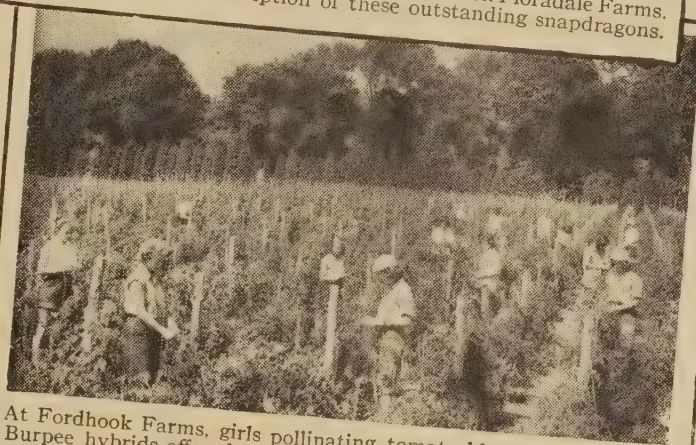

It is a pleasure to know that our efforts to create new and better varieties are being so appreciated by our fellow gardeners. It is our intention to continue our leadership in giving you the newest and best for your garden.

Our buildings in Philadelphia, Pa., and Clinton, Iowa, are especially equipped to handle your orders with speed and efficiency—for the quickest service send to the Burpee Building nearer to you. No orders are filled at our farms.

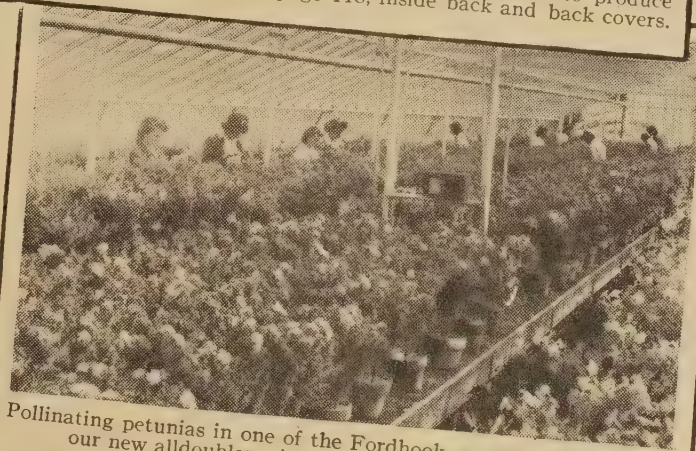

**FREE DELIVERY** Burpee pays delivery charges anywhere in the U. S. on everything offered in this catalog except large quantities of vegetable roots and fertilizers marked "not prepaid." On these, the customer pays the transportation charges.

# BURPEE'S Annual Flower Seeds

## 1610 BURPEE DOUBLE SNAPDRAGON

Burpee Double is the first giant, alldouble snapdragon ever grown from seed. The flowers are spectacular and distinctly outstanding, not only for their size but for their unusual, exquisite and amazing formation.

Individual flowers are quite large,  $1\frac{3}{4}$  in. across and  $1\frac{1}{2}$  in. deep when well grown. The upper lip broadens and recurves gracefully. From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat are several small, wavy accessory petals which add grace, charm and refinement, as well as surprise, to an already handsome flower.

In addition to a new form, we have a distinct combination of colors; the ground color is soft canary yellow shading to golden yellow in the rounded portion of the lower lip; the reverse of lips is suffused light rose-pink as is the upper lip, the flare of the lower lip and the small petals protruding from the throat. The back of unopened flowers are heavily flushed rose-pink. Tube is pink suffused light yellow adding contrast and richness.

The central spike grows about 28 in. tall and flowers first, followed by many lateral branches which arise from the main stem close to the ground. All the lateral stems bloom at one time so that the plants produce a great mass of color in beds or borders. Besides being valuable for garden effect, Burpee Double Snapdragons are unsurpassed for cutting. In some of the flowers, there is a pleasing, spicy fragrance.

If you want extraordinary snapdragons, grow Burpee Double,—the first of a new type that is excitingly different and a truly aristocratic flower of the highest quality. It is the result of seven years of breeding and selection by our experts on Burpee's Floradale Farms. As easy to grow as any snapdragon.

# Burpee's TETRA SNAPS

## Giant Ruffled Tetraploid Snapdragons

Burpee's  
Tetra Snaps  
(Note the  
ruffling)  
Pkt. 25¢

**1576 Superfine Mixture** The largest flowered of all snapdragons, 2 to 2½ in. deep and 1¾ to 2¼ in. wide, many distinctly and attractively ruffled; every color seen in this glorious flower, plus some new ones. There are shades and variations of bright orange, light orange, peach-orange, rose-orange, bronzy yellow, golden yellow, canary yellow, yellow-flecked red, antique bronze, reddish bronze, orchid, scarlet-tipped yellow, scarlet, crimson, pinks from apple-blossom to deep rose, pink-flushed yellow, pink and white combination, pure white and others of harmonious tone blendings; a most unusual and pleasing mixture.

Tetra Snaps are a new "scientific" creation—a new group of snapdragons originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. The plants not only have larger flowers but are stronger and huskier, trifle taller than diploids with glossy, dark green foliage, thick and almost leathery in texture; the stems, too, are stouter. Under general field conditions the central spikes average 2½ ft. in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting. The flowers are of heavy substance, which adds to their keeping value. Genetically, Tetra Snaps are known as tetraploid snapdragons for they have twice the number of chromosomes in their cells as regular or diploid snapdragons.

For several years we have selected the most cheerful and desirable colors, the largest flowers and the best spikes for this carefully blended mixture of tetraploid snapdragons—tetra snaps for short. Our fields of thousands and thousands of plants in a riot of colors, were really a sight to behold. They, too, will be admired in your garden or home.

Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00; 1/16 oz. \$2.00

Invaluable for cutting. Plants will grow 4 ft. and more tall under glass during the winter, depending on climate, planting dates and growing conditions.

### RUST-RESISTANT VARIETIES

## SNAPDRAGONS

(botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

ALL-AMERICA WINNER FOR 1947

**1580 Velvet Giant** is an outstanding, new, vigorous growing snapdragon, 2½ ft. tall, individual plants producing 6 to 12 towering spikes each filled with many nicely placed flowers. These flowers are very large compared with other regular or diploid varieties. A velvety texture adds richness to the deep crimson blooms while an undertone of orange-bronze showing through the crimson lightens up the color and gives it life. The long stems of closely and uniformly spaced flowers, with many open at one time, make Velvet Giant a top-notch antirrhinum for cutting and garden decoration.

# Burpee's PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam, such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in the shade nor in soil that is overly rich. We offer an extra select assortment of varieties, some of which are suited for bedding and pot culture, others are ideal for edgings and mass plantings, while many are unexcelled for porch and window boxes; all are excellent for cutting.

## Dwarf Petunias (*Petunia hybrida nana compacta*)

The dwarf compact petunias are very free flowering, the round, mound-like plants being covered with blooms from early summer until frost. Ideal for edgings to taller petunias or other plants; unexcelled for beds, borders and highly desirable for pot culture. May be depended upon to produce a grand display. 10 to 12 in. tall, except where otherwise noted.

# Burpee's Improved COSMOS

Beautiful summer and fall blooming plants; decorative in the garden and wonderful for cutting, lasting longer if flowers are placed in water immediately after being cut. # Burpee's Beautiful ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late blooming varieties. If you plant some very early varieties, we suggest that you have seedlings of other flowers coming along to take the place of the earliest when they are through blooming, thus keeping all your ground occupied during the entire season.

**\* Varieties marked with an asterisk (\*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."**

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms, sow seed indoors in boxes or pans six weeks before your usual outdoor planting time. Set the plants out in the garden when weather gets warm.

## Burpee's Extra Early Asters—In full bloom before others begin to flower

To those who love the delicacy and richness of asters, these extremely early flowering varieties will be a joy. They begin to bloom in about 14 weeks after seed is sown—long before most other asters begin to bud. Extreme earliness and good cutting stems make them a most welcome new type of aster for the home gardener and the florist. They are valuable everywhere but especially so in sections where summers are short and the regular types of asters do not have a long enough season to perfect their blooms.

**1605 Early Bird** New for 1947. A good companion to Navy Blue and Violet Glory, as first flowers appear very early and the plants will continue to produce their colorful carmine-rose flowers for several weeks. As flowers age, the outer petals become attractively tipped lighter rose. Blooms are double, petals evenly placed and grow  $3\frac{1}{2}$  in. across. Plants grow 15 in. and more high.

Pkt. 25¢;  $\frac{1}{8}$  oz. 75¢;  $\frac{1}{4}$  oz. \$1.25

**1603 Navy Blue** Giant flowered aster; rather close in form to that of the Giant Crego type. The flowers are large, about 4 in. in diameter, with long ribbon-like, beautifully curled, twisted and interlaced petals of a rich, luminous, deep velvety purple-blue color. Plants grow about 20 in. tall. Stems are long and wiry, 12 in. and more in length; wonderful for cutting. Makes a grand showing in the garden for many weeks as plants are extremely free-blooming.

Pkt. 15¢;  $\frac{1}{8}$  oz. 50¢;  $\frac{1}{4}$  oz. 85¢

**3087 Violet Glory** Deep purple-violet flowers, 3 to  $3\frac{1}{2}$  in. across with the center incurving petals displaying a silvery sheen. Plants are of open, spreading habit,  $1\frac{1}{2}$  ft. tall and about 2 ft. across; not very leafy, seeming to give all their strength to the flowers, which are freely borne on stems ranging in length from 12 to 15 in. Its merit is its extreme earliness. Last long when cut.

# Early Flowering SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—3 to 4 weeks earlier than the Giant Spencer varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

## SPRING FLOWERING SWEET PEAS

Come into bloom, outdoors, between the Early and Giant Spencer classes. Plants are quite vigorous and what the flowers lack in size is made up by the heavy crop of blooms produced. Vines seem more heat resistant than other sweet peas. Under glass they are unusually free flowering and prolong the spring cutting season. We offer three distinct and desirable colors, each of which received an award in the All-America Selections.

**3470 Blue** Clear marine blue; free and continuous bloomer.

**3479 Lavender** Lovely soft shade of lavender. Attractive.

**3447 Rose Pink** Beautiful rose-pink on white. Striking.

# Burpee's Annual LARKSPURS

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure.

They like cool weather in which to germinate and to grow best. Seed should be sown as early in the spring as the ground can be worked—the earlier, the better—but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin them to stand 1 to 1½ ft. apart. We offer your choice of three distinct types.

# Burpee's Famous ZINNIAS

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They last for days when cut; we offer a selection of different size flowers and colors for every purpose. All the different types are easy to grow. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing to bloom until fall.

## Giant Dahlia Flowered Zinnias

These zinnias are outstanding both for the exquisite form of their long-stemmed flowers, which resemble giant dahlias, and for the pastel shades included in their range of color. The individual

blooms grow about 5 in. across and 2 in. or more in depth. The well-branched sturdy plants grow 3 ft. high. Showy in the garden; wonderful for cutting as flowers have remarkable keeping qualities.

# Burpee's Super Giants

*Pictured in color on Inside Front Cover*

**3175 Finest Mixed** Contains the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed by the many two-tone and three-tone color effects seen in some of the blooms of Burpee's Super Giants.

Flowers are truly giant,  $5\frac{1}{2}$  to  $6\frac{1}{2}$  in. across, and of a wide diversity of flower form—some like Dahlia Flowered, others like Giants of California, and still others with curled and twisted chrysanthemum-like flower heads. Striking in the garden; invaluable for cutting and are wonderful for exhibition purposes.

Plants are strong growers, vigorous, well branched, thus producing many huge blooms throughout the season. Plants 3 ft. tall.

## Giants of California Zinnias

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the dahlia flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, well-branched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders.

**3185 Daffodil** Distinct shade of bright canary or daffodil-yellow that is extremely popular for cutting.

**3190 Enchantress** Light rose with dark rose center. A truly enchanting two-toned color combination.

**3192 Golden Queen or Lemon Queen** Light lemon-yellow with a distinct golden yellow suffusion.

**3197 Lavender Gem** Deep lavender, turning to a warm purple as the flower matures. A rare shade.

**3187 Orange King** Rich cadmium or orange-scarlet of remarkable brilliance; many are two-toned.

**3186 Purity** Outstanding for its pure white color.

**3188 Rose Queen** Pure, clear rose. Highly desirable shade for garden decoration and cut flowers.

**3198 Salmon Queen** Salmon-rose flowers of unusual beauty; a most delightful color for cutting and garden display.

**3189 Scarlet King** Glowing scarlet of exceptional brilliance.

**3199 Violet Queen** Marvelous flowers of a wonderful shade of deep purple; especially beautiful under artificial light.

**3195 All Colors Mixed** This mixture has been most carefully blended according to color values. All of the ten named varieties are grown separately, and the proper quantity of each is put in this mixture to make a well-balanced display.

# Burpee's Fragrant NASTURTIUMS

Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and tall or dwarf growing. Their varied and brilliant colors, different shapes and refreshing fragrance make them most desirable for cutting.

# Burpee's Giant Pansies

Pansies always have been a great specialty with us and we are justly proud of the quality and trueness to type of our strains. Pansies succeed best in rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back, and you will get a nice lot of flowers again in the fall. For earliest blooms, start seed indoors four to six weeks before your outdoor planting time.

## 2513 Burpee Blend of Giant Fancy Pansies

A carefully prepared mixture that is unsurpassed in every way. Plants are selected for their vigor and the way they hold their flowers well above the foliage; blooms are of the largest size and of the most beautiful, distinct and varied colors, including blotched varieties. Flowers are also heavy, thick, well waved, and crinkled at the edges. Every worthwhile color and color combination has been included in this special blend.

Pkt. 35¢;  $\frac{1}{16}$  oz. \$1.00;  $\frac{1}{8}$  oz. \$1.75

Perennials are most important flowers in the garden. With proper selection they can be had in bloom from

# CAMPANULAS—Canterbury Bells—Bellflowers

## Biennial Varieties

Most useful, beautiful subjects for the garden; of easy culture and succeed in any good, well-drained soil. Cup-and-Saucer, Single and Double Canterbury Bells, are biennials. The plants bloom the second year from seed, then die. For a continuous display of these imposing, highly desirable flowers in your garden annually, seed must be sown every year.

### Cup-and-Saucer Canterbury Bells

#### (*Campanula calycanthemata*)

Showy blooms similar to the Single Canterbury Bells, but with an extra large calyx of the same color as the cup-shaped corolla. This gives it the appearance of a saucer under a cup, hence the name. Plants bloom in June and grow 2 to 2½ ft. tall.

# Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly

decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

# BURPEE'S Famous Vegetable Seeds

It is surprising the quantity of vegetables that can be raised on even a small plot of ground with little effort and time. Living costs are high, which alone should be sufficient reason for greater production of homegrown vegetables. Then, too, the vegetables you grow will have much better flavor than those you buy. Home vegetable gardening is a big business, and a very interesting and healthful one for all to enjoy.

For extra yield and more food per sq. ft. of garden space, plant hybrids wherever they are available. If you have room for sweet corn, be sure to grow the new Burpee Snowcross and Burpee Surecross hybrids offered on page 89; Burpee Hybrid Cucumber, page 92; Burpee Hybrid Eggplant, page 94; Yankee Hybrid Squash, page 114; Burpee Hybrid Tomatoes, page 118.

Hybrids are strong, vigorous growers and outyield regular varieties, the extra quantities coming, in large measure, from the soil. To produce more, these plants should be fed more. Extra applications of manure or fertilizers will help you get maximum results.

Do not be satisfied with one crop of vegetables from seed sown in the spring. Keep your garden working three seasons out of four and in mild climates it is possible to make plantings so that crops may be harvested every month. Be sure to can, freeze, dry and store as much food as possible for use during the winter. Keep all ground occupied. When an early crop is harvested, follow it by another. Plant a leaf crop after a root crop and vice-versa. Before doing so, prepare the soil well, add fertilizer, working it lightly into the soil.

## Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

## ◎ Follow the Bull's Eye ◎

We have used this mark, ◎, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, ◎, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class**. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They are reliable.

## Burpee's Cultural Leaflets, Free on Request

"How to Grow" directions are printed on every bag of Burpee's Seeds which, if followed, should produce satisfactory results, provided that soil and weather conditions are favorable and plants are properly cared for throughout the growing season. Some growers, however, are in need of special or more detailed information on certain subjects and the following instructive leaflets are free if asked for when ordering your seeds. You need not write out the full names; give the number assigned each leaflet:

Richard Lee Killmer, son of  
Mr. and Mrs. Edward Killmer, Woodbridge, N. J.

When sending us this picture last May, Mrs. Killmer wrote "Richard has always been fond of the Burpee catalog. As a baby, he liked the colored pictures, but this year (1946) he had the fun of planting his first garden. Richard became so enthusiastic planting vegetable seeds that several beans came up in the rows of corn. He just loves flowers, too."

Richard was born October 15th, 1942, and soon thereafter his daddy became a U. S. Navy Seabee. For the three years he was away, Mrs. Killmer took care of the garden alone and grew plenty of vegetables for Richard and herself.

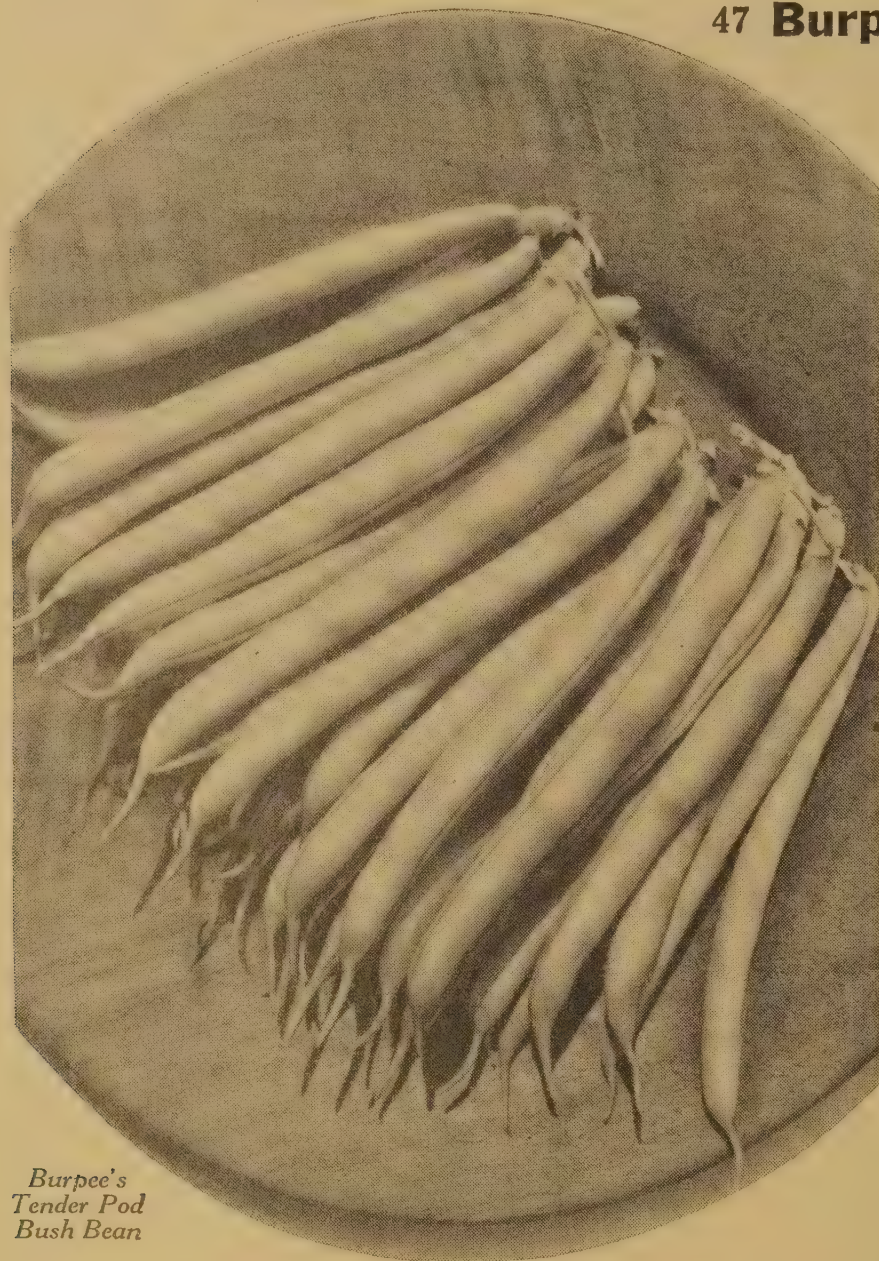

Congratulations, Mrs. Killmer and best wishes to the Killmers for most successful gardens in the years to come.

# Stringless Green-Pod BUSH BEANS

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we

are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins then, are better for you, and, of course, they taste better.

*Burpee's  
Tender Pod  
Bush Bean*

## 47 Burpee's Tender Pod ☉

48 days. The best and most delicate flavored as well as the most tender of all green snap beans. Pods are stringless,  $4\frac{1}{2}$  to 5 in. long, thick, round in cross section, smooth, deep dark green in color, curving slightly, with long and distinctively curved tips. Of great value for the home garden; wonderful for canning and freezing; matures early and is productive over a long period. The seed is pearly white, with a small red spot on either side of the eye; if allowed to ripen are suitable for use as a dried shell bean. It is, however, principally grown for its delicious pods, attractive in appearance and excellent in flavor. *Pictured in color on the inside back cover.* All-America Winner.

2 lbs. \$1.55; 5 lbs. \$3.40

## 13 Bountiful ☉

47 days. Broad, flat, tender green pods, 6 to 7 in. long; strictly stringless, and of a rich flavor. Has proved to be unexcelled on heavy as well as light soils; reliable everywhere. Plants are vigorous, hardy and very prolific. Bountiful is the most popular extra early, flat green-pod bush bean for home, market and freezing. It is valuable for long-distance shipping.

### How to Grow BUSH SNAP BEANS

Plant seed when danger of frost is past and the soil is quite warm, in rows 18 to 30 in. apart for hand cultivation or  $2\frac{1}{2}$  to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to bear before frost. Plants will bear more pods if you pick them when young. They grow 15 to 20 in. tall. A pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

Planting information given for Bush Snap Beans on page 72 applies to yellow and green pods alike. Bushes range in height from 12 to 24 in.; are robust growers producing an abundance of pods over a long period.

# Burpee's POLE BEANS

Come into bearing later than bush varieties and bear more heavily over a longer period and some varieties produce bigger pods. Support must be given the vines which grow 6 to 8 ft. or more high. Young pods make delicious snap-shorts; also popular

as shell beans, green or dried. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type. Kentucky Wonder (green-pod) and Golden Cluster Wax (yellow-pod) are popular and dependable varieties.

## 72 Kentucky Wonder or Old Homestead ☉

65 days. Most popular and dependable throughout the country. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long, in clusters. Pods are thick and meaty, tender, brittle, excellent for freezing, and, when young, are free from string or fiber although small strings develop later. These strings do not impair the quality of the pods so that they can be eaten until late in the season. Though thick, the pods appear slender on account of their length. The light brown seeds have a tasty flavor which makes them so desirable for use as shell beans. A profitable market bean in many sections.

## How to Grow POLE BEANS

Pole Beans are less hardy than bush varieties, so should not be planted until all danger of frost is past and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles. Pole Beans may also be planted along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

Kentucky Wonder Pole Beans

# Bush LIMA BEANS

Easier grown than pole limas and the yield per sq. ft. of garden space is about the same for each or in some localities and seasons may be in favor of the pole varieties. Varied size and shape of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter limas (Thorogreen). Some prefer one type for eating fresh, another as dry beans or quick freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size.

Burpee's  
Fordhook  
Bush Lima Bean

## 65 Burpee's Fordhook Ⓞ—Most popular bush lima

75 days. The leading variety of bush lima beans for home garden, freezing or commercial use. Pods are 4 to 5 in. long, 1 to 1½ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans whose dry, mealy quality and delicious flavor, not unlike chestnuts, are familiar to everyone who uses lima beans. Seeds hold their green color until quite old; cream colored when ripe.

Plants are bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many pod-bearing lateral branches. Bearing season is long and a planting may be picked for a month or more.

Fine quality, large pods, and always salable, attractive appearance, made Fordhook the universally known large "potato" type bush lima bean for all purposes. Introduced by Burpee and named for Burpee's famous Fordhook Farms. Buy from the originator.

Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

## 61 Baby Fordhook

70 days. Thick-seeded or "potato" type small lima bean considered by many to be of better quality than the flat type. It was designed especially for canning and freezing; home gardeners, too, will appreciate its surprisingly heavy crop of pods. Plant is truly bush, about 14 in. tall. Pods are 2¾ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded. Seed is green turning cream when dry.

## 53 Fordhook Special

75 days. This new strain of Fordhook Bush Lima was a selection developed by Dr. Roy A. Magruder and Dr. Robert E. Wester of the Bureau of Plant Industry, U. S. Department of Agriculture, at the Beltsville, Md., Experiment Farms. They called it Fordhook 242. The Fordhook Special which we offer is the same variety especially grown by Burpee. The original Fordhook was introduced by Burpee in 1907.

Fordhook Special begins to bear about the same time as Burpee's Fordhook, and because of its high resistance to drought, the plants set well under adverse conditions so that, in some sections, it is a heavier yielder. Pods are smaller than Burpee's Fordhook, being 3 to 4 in. long, with 3 or 4 thick, green beans the color of which is retained for a long period. Eating quality is excellent either fresh, canned or frozen. All-America Winner.

## How to Grow BUSH LIMA BEANS

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

# Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is about the same as that for bush limas or slightly larger. Some persons prefer the flavor of pole limas to the bush varieties, some like the thick or "potato" type (Burpee's Best), others the flat (Burpee's Improved Giant Podded), some choose the large seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

## 106 Burpee's Improved Giant Podded ☉

90 days. The largest podded of all pole limas. The pods are truly enormous, 7 to 8 in. long, 1½ to 2 in. wide, with five and sometimes six extra large, flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 to 12 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. We can recommend it highly for home gardens; also readily salable on local markets and roadside stands.

Pkt. 15¢; ½ lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.05; 5 lbs. \$2.40

## 103 Carolina or Sieva—The well-known "Butter Bean" of the South

78 days. The vines quickly produce a fine crop of small, attractive pods, 3½ in. long, each with 3 or 4 small, flat, green beans of splendid quality. Especially valuable in cooler sections of the country where the large-seeded varieties are too late to produce well and in localities with hot, dry summers where pods often fail to set. Vigorous grower. Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

## 102 Florida Speckled Butter

78 days. Vigorous plants; pods medium dark green, 3 to 3½ in. long, each with 3 and occasionally 4 small, flat, white beans with approximately one-third of the surface marked deep purple. If picked when young, the markings on the seed will not yet have been developed. Prolific over a long bearing season. Stands up well under hot and dry weather conditions; popular in the South.

Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00

## 99 King of the Garden—Popular

88 days. Pods are from 5 to 7 in. long and contain 5 and often 6 large, flat beans which are easily shelled, of handsome appearance and excellent quality. They are borne most profusely until frost has killed the vines. One of the leading pole limas for freezing, home and market. Plants are tall; good climbers.

Pkt. 15¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

## 105 Burpee's Best ☉—Thick seeded

92 days. The Fordhook among the pole limas. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—its thick seed, straight, smooth pod, its rich tenderness, not only larger pods but three or four times as many on each of the vigorous plants which are strong growing climbers attaining 10 to 12 ft. under average conditions. They produce pods in clusters of 4 to 8 along their entire height. Pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch through, well filled with 4 or 5 and sometimes 6 big, thick, plump beans that are exceptionally tender and have the distinctive, pleasing nutty flavor of the bush Fordhook.

Burpee's Best represents a marked improvement over any pole lima of the thick-seeded or "potato" type for home and market. It is excellent for freezing and has remarkable long-distance shipping qualities.

Pkt. 15¢; ½ lb. 35¢; 1 lb. 60¢;  
2 lbs. \$1.05; 5 lbs. \$2.40

### How to Grow POLE LIMAS

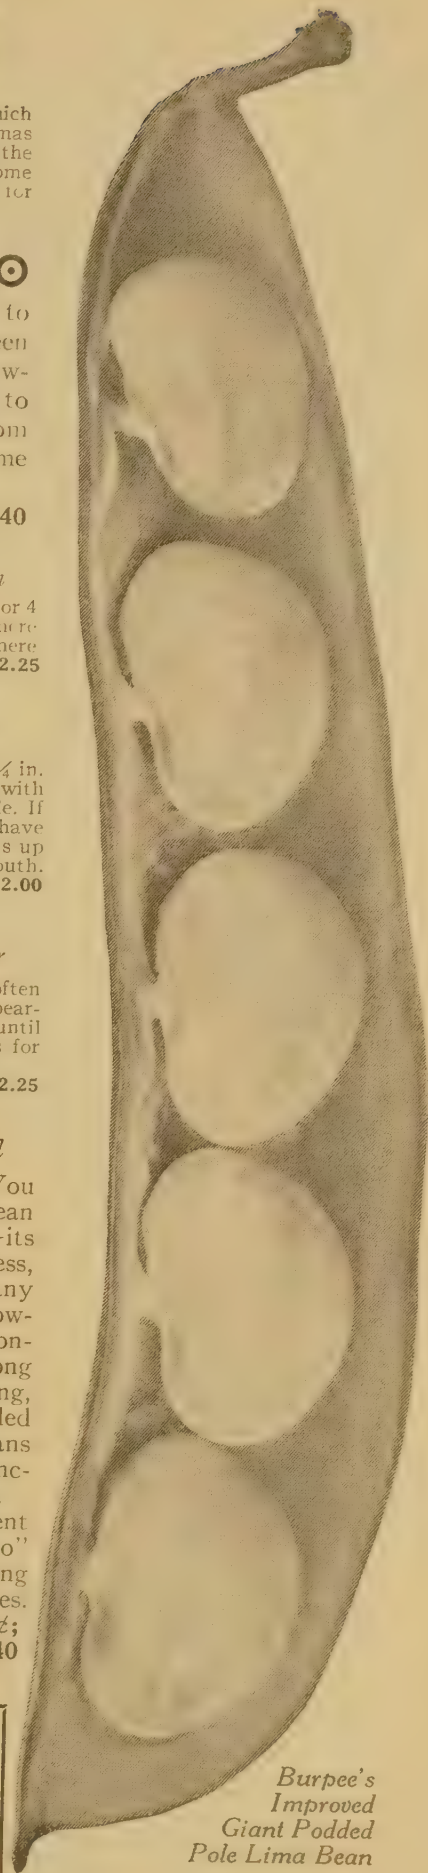

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row.

for freezing, home or market.

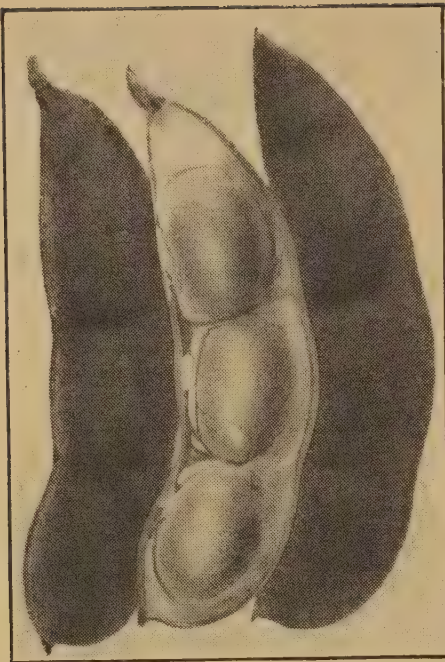

# EDIBLE SOY BEANS

Plants are extremely productive, vigorous and upright growing, 2 ft. and more high. Do not require support. Pods are not edible; beans are delicious, either cooked as green shelled beans or as dried shell beans and served similarly to lima beans. High in proteins and vitamins. Suitable for freezing. A pkt. will plant 25 ft. of row; 1 lb. 150 ft.

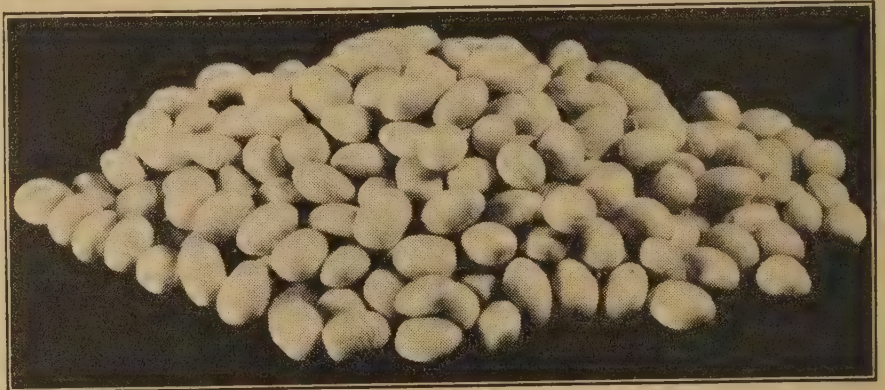

**35 Bansei** 96 days. One of the most productive; it will produce crops in nearly any section of the country. The plants are erect, bush-like and literally loaded with pods, each containing 2 or 3, oval-shaped, bright green beans which turn yellow when mature. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00

**37 Funk Delicious** 105 days. Pods contain two and sometimes three beans, as large as baby limas in the green shell stage; pale green as they come from the pod and a beautiful bright green when cooked. Dry seed is large, round and straw-yellow in color. Heavy yielding vigorous plants. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

**46 Mendota** 90 days. Resistant to crinkle virus, a destructive disease in many locations. Pods contain 2 or 3 bright green seeds; straw-yellow when they are mature. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1.05; 5 lbs. \$2.40

*Michilite Pea Beans—the leading small white dried bean*

## BUSH SHELL BEANS

*may be used either green or dried*

Grown mostly as dried beans for winter use; the pods of Dwarf and French Horticultural may be used, when young, as snap beans. The culture is similar to that recommended for bush beans on page 72, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 75, are also desirable as shell beans.

**26 Dwarf Horticultural** 65 days to green shell beans. Pods 5 to 5½ in. long, thick-flat, light green, splashed with carmine at maturity. As they are almost stringless, they may be used for snap beans when young or for shell beans later. Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. \$1.15; 5 lbs. \$2.60

**57 French Horticultural** 73 days to green shell beans. The attractive broad, flat, light green pods grow 6 to 7 in. long, and are heavily splashed and streaked with bright carmine at the green shell stage. Immensely productive. Pkt. 15¢; ½ lb. 40¢; lb. 75¢; 2 lbs. \$1.40; 5 lbs. \$3.10

**56 Great Northern** 90 days. Pods are 3 to 4 in. long, oval, dark green, prolific. The medium-large, flattened-oval, white dry beans are excellent for boiling, baking and soup for which purpose they are used during the winter. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.50

**30 Michilite Pea Bean** 90 days. Similar to Improved White Navy but more uniform, productive, and of better quality. The small white beans have a delicious flavor; used for baking, boiling and soup or may be dried for winter. Pkt. 10¢; ½ lb. 20¢; lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.50

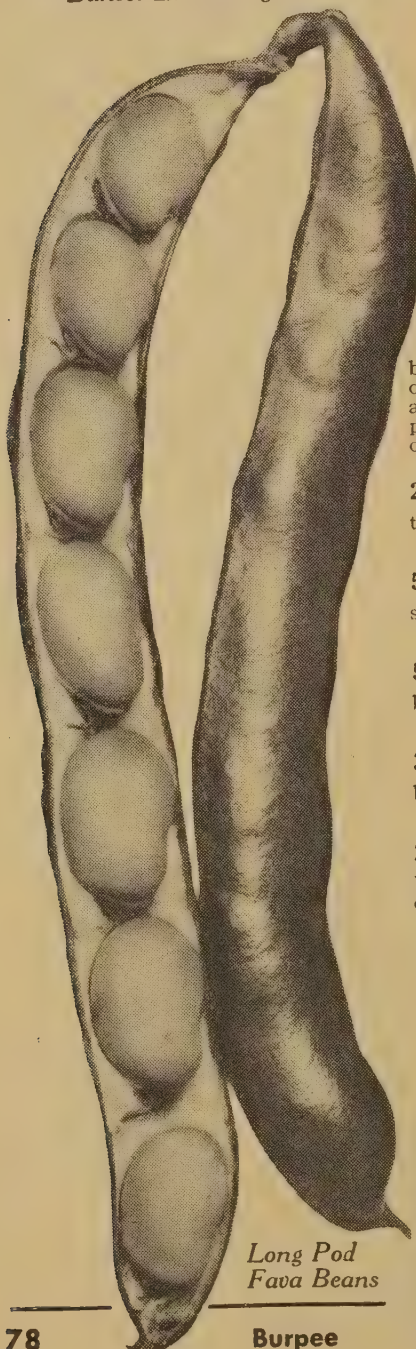

**28 Red Kidney** 95 days. Pods are 6 in. long, flat, light green; beans are large, kidney-shaped, pinkish red to mahogany in color, and are in great demand, baked, boiled, in soups and various Spanish and Mexican dishes. They have a rich flavor, entirely different from white shell beans and are preferred to all other beans by many persons. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.20

**29 White Marrowfat** 100 days. The pods grow 4½ to 5 in. long, flat, nearly straight, and well filled with 5 and sometimes 6 large white plump beans; valued for baking. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75

## GIANT BUTTER or FAVA BEANS

*Mammoth pods with 5 to 7 lima-like beans*

**24 Long Pod** 85 days. Giant Butter or Fava are the well known Broad Beans, much harder than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and contain 5 to 7 large, oblong-shaped, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble lima beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. Becoming very popular, especially in large city hotels and restaurants. Dry seed is large, circular, flat, reddish brown with black eye. Try a planting this year; plant early. One pkt. will plant 15 ft. of row; 1 lb. 75 ft. of row. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

*Long Pod  
Fava Beans*

**Burpee**

## BROCCOLI Italian Green Sprouting

Most easily grown and delicious flavored vegetable for home, market and freezing. Plants are tall, erect and vigorous, 2½ ft. and more in height. They should be staked or given some other form of support.

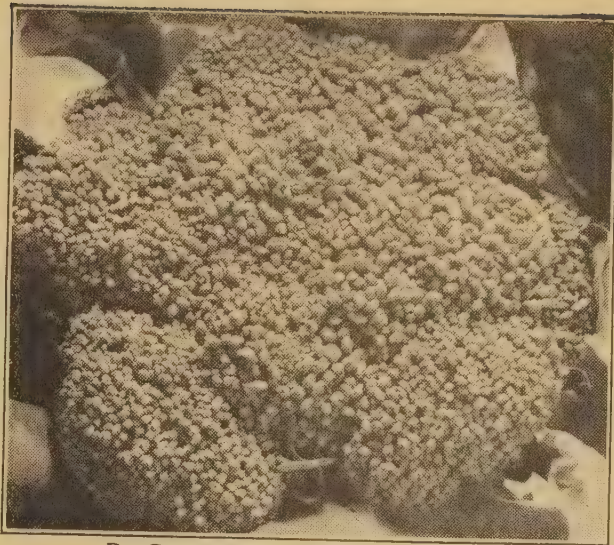

Seeds sown in early spring outdoors will furnish heads in summer while sowings made in midsummer will provide for a late summer and fall crop. For the earliest crop, sow seeds early in hotbed or house and transplant the young plants to the garden when soil has become warm. A pkt. will produce about 250 plants; an oz. 3,000.

**157 Calabrese** 85 days. The central large, cauliflower-like head of bluish green flower buds grows 5 or 6 in. in diameter and after being cut numerous smaller heads appear on the side branches over a long period. Keep green sprouts cut off before flower buds open.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.25

**156 De Cicco** 78 days. Very similar in every way to Calabrese but a week earlier in maturing. We recommend it highly for both home and market.

Pkt. 20¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$3.25

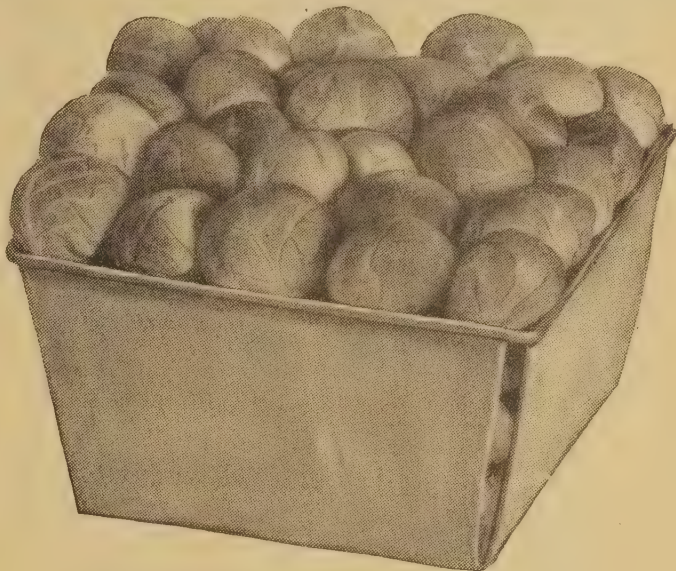

*De Cicco, Green Sprouting Broccoli*

## BRUSSELS SPROUTS

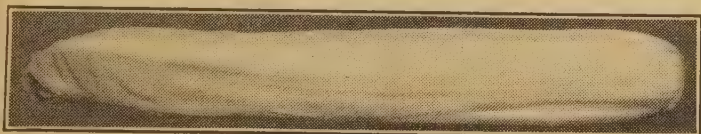

**158 Long Island Improved** 120 days. Grown extensively on Long Island for the New York market and the most satisfactory variety for use throughout the U. S. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1¼ to 1½ in. in diameter with a more delicate flavor than cabbage. This is a splendid vegetable.

Brussels Sprouts are easy to grow. In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seedbed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the stalk. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. Becoming more popular in home gardens. Suitable for freezing. A pkt. will produce about 250 plants; an oz. 3000.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.70

*Witloof Chicory*

## CHICORY—Delicious, appetizing salad

**297 Witloof (French Endive)** 110 days. A choice salad delicacy for fall and winter. Sow seed in the spring. In early fall, cut off foliage 1 in. above soil level, cover with 8 to 10 in. of soil and keep in place with boards set along the sides for three or four weeks when a pure white blanching stalk should be ready. Cut off about 1 in. above the top of the root and repeat as above for a second crop, or if wanted during the winter in cold sections, dig the roots, store for a few days in a shed or pit so they may become thoroughly chilled, then place upright in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. In about a month, the sprouts should break through the surface and be ready for use again as a salad.

Pkt. 10¢; ½ oz. 35¢; oz. 65¢

## CRESS—Easy, quick growing "green"

**364 Fine Curled (Pepper Grass)** 40 days. Grows very quickly and is of the easiest culture. The finely cut leaves may be used for flavoring salads, for garnishing, or as a "green" in sandwiches. Used with lettuce, it adds an agreeably pungent taste; best if used when young.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

**365 Upland** 60 days. Leaves are dark green, thick, broad and grow in rosette early in the spring. At this time they are crisp, tender and of the same pungent flavor as water cress which it resembles though it succeeds in dry soil. May be used until seed stalks begin to form.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

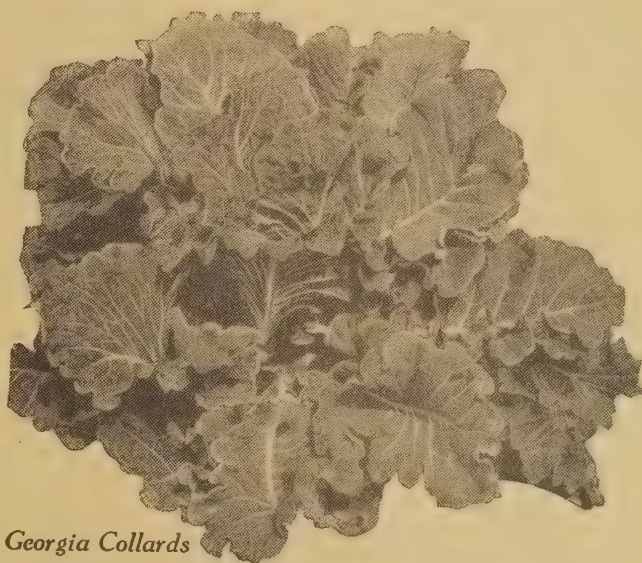

**366 Water Cress** 50 days. Start the seed in pots set in a pan of water and transplant into a shallow running stream of pure fresh water or it can be grown in moist soil in a shady place if plenty of water is provided. Gives an appetizing, mildly pungent salad and is largely used for garnishing. Extensively grown in greenhouses for market during the winter. Who does not like its distinctive tangy flavor?

Pkt. 20¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$1.80

## CORN SALAD—Lamb's Lettuce

**351 Large Leaved Round** 60 days. Quick growing plant for early spring, late fall or winter use. It is quite hardy, producing an abundance of gray-green rounded leaves which are sometimes served like lettuce but are better if mixed with more piquant "greens." May also be cooked like spinach or used for garnishing like parsley.

Pkt. 25¢; ½ oz. 35¢; oz. 65¢; ¼ lb. \$1.95

*Georgia Collards*

## COLLARDS—Non-heading cabbage

**299 Georgia** 80 days. Large, juicy, green leaves which are usually stripped from the plant as they mature thus providing delicious boiling "greens" of fine quality throughout the entire season. Will stand light freezing which improves the mild cabbage-like flavor of the leaves. Does not form heads. Deserves to be better known. Erect, spreading plants; 2 to 3 ft. tall.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢

# Burpee's RED BEETS

Beets are easily grown and may be enjoyed as baby beets when roots are half grown or they may be used from then on until they reach their full size. The tops are highly palatable when cooked alone as "greens" or young beets with their tops may be cooked

together. Burpee's Red Ball, Detroit Dark Red and Crosby's Egyptian are universally popular. Spinach Beet (Swiss Chard) is grown extensively for the use of its tops as "greens" and its mid-ribs as asparagus; we offer it separately on page 116.

*Detroit Dark Red Beets*

## 115a Detroit Dark Red, Short Top ☉

60 days. One of the best round beets for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red, sweet and tender. Smaller tops allow beets to stand closer together in the row.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75; lb. \$3.25

## 115 Detroit Dark Red, Medium Top

59 days. Beets are perfectly round with deep red skin. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Medium size foliage makes it popular with housewives wanting plenty of "tops" for use as "greens." Roots are slightly larger than the short top strain offered above. Splendid for the home garden, market, shipping, freezing and canning.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75; lb. \$3.25

## 121 Burpee's Red Ball ☉—Always satisfactory

60 days. Remarkable for its uniform shape, deep colored flesh, and fine sweet flavor. Roots are deep, globe-shaped, growing to 3 in. in diameter, and having a smooth, deep red skin. The flesh is also extremely dark red, free from woody fiber, and very tasty. The quality is always the finest. Its intense dark red color especially fits it for table use, pickling, freezing and canning. Medium tall tops.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75; lb. \$3.25

## 128 Burpee's Improved Blood Turnip Beet

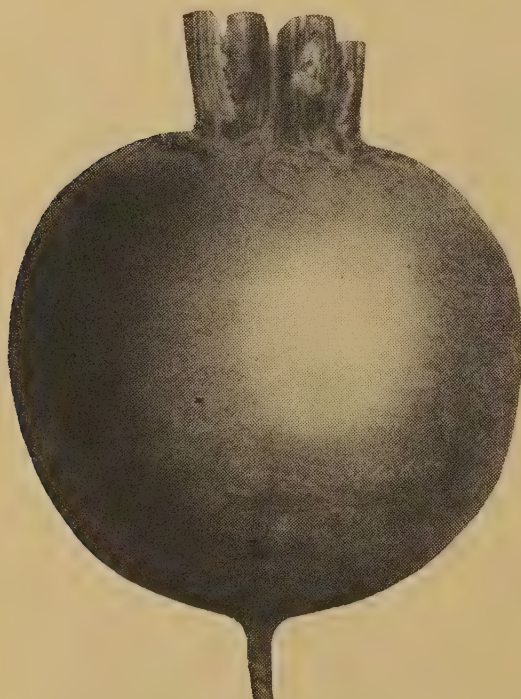

59 days. The large beets, 3 to 4 in. across, are round but sometimes deeper than their diameter. The flesh is dark red, occasionally zoned. Though it is a quick grower, the roots will keep a long time in storage. Splendid for the home garden and for market gardeners. Flesh is fine grained, tender and most agreeably sweet. It may be grown for early use, summer, fall or winter storing as well as for canning. Because of its quickness of growth, it is especially suited for late sowings. It is really an all-season, all-purpose, deep red table beet of the highest quality.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50; lb. \$2.75

## 107 Burpee's Extra Early ☉—Globe shaped

Popular with home and market gardeners. Flavor is sweet and tasty; much esteemed for canning or pickling whole.

Pkt. 15¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.40; lb. \$2.50

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75; lb. \$3.25

### How to Grow BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Sow seed in rows 1½ to 2 ft. apart and cover with ½ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use throughout the winter months. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

## Mangels and Sugar Beets

Used largely for winter feeding of cattle, sheep and poultry. Sow seed in early spring in rows 2 to 3 ft. apart; cover with ½ in. of soil. A packet will sow 25 ft. of row; an oz. 100 ft.

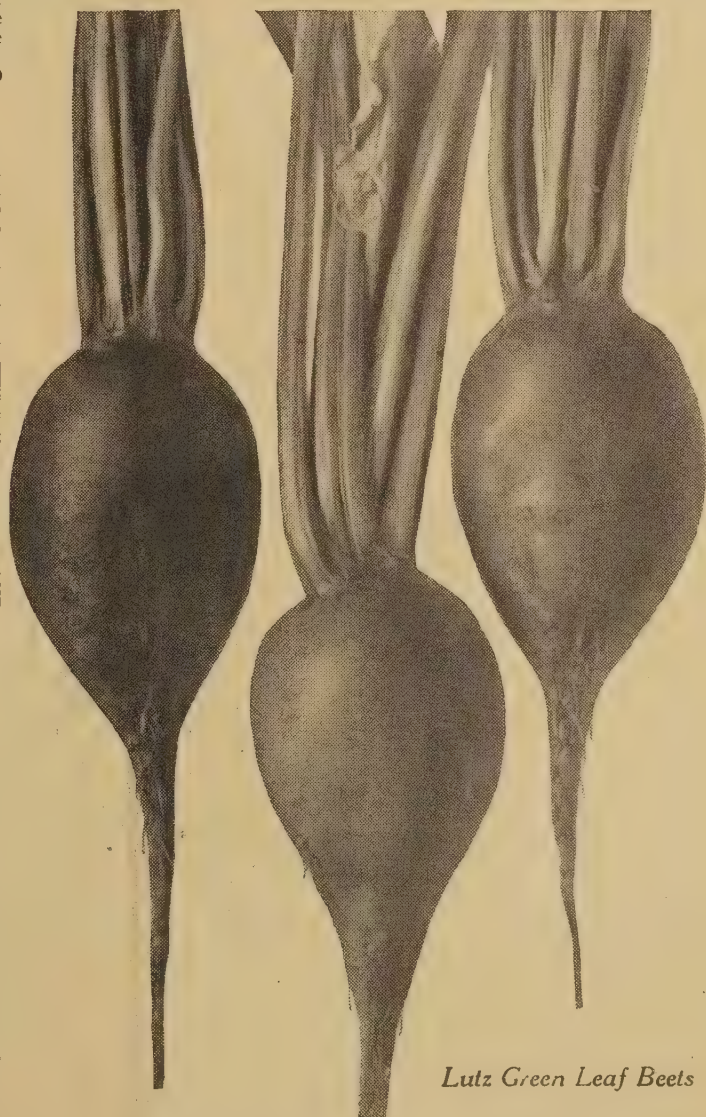

**151 Mammoth Prize Long Red** 110 days. Largest and heaviest cropping mangel. Roots grow to a truly enormous size; 18 to 24 in. long, 5 to 6 in. across. Skin is red, flesh white veined pink. Grow ½ to ¾ above ground so they are easy to harvest.  
Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

**145 Giant Half Sugar Rose** 90 days. Broad, wedge-shaped mangel. Skin is bright rose above and white below; flesh is white. Highly nutritious and rich in sugar. Grows ½ above ground.

# Burpee's Earliest CABBAGE

*Burpee's  
Copenhagen  
Market*

## 192 Burpee's Copenhagen Market ☉

72 days. An outstanding strain of the variety which is notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. Plants are small and quite compact with few outer leaves, which permits close planting. Heavy yield, convenient size, attractive shape, solidity and fine quality combine to make Copenhagen Market the popular early cabbage it is today. The flavor is remarkably fine so that it is also desirable for early kraut making. Reliable and uniform. First introduced in America by Burpee

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.25

*Early  
Jersey  
Wakefield*

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crinkly leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some the round heads (Copenhagen Market); others, the pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are highly desirable for fall use and winter storing. Chinese or Celery Cabbage may be served like lettuce, cole slaw or cooked like regular cabbage.

## 175 Golden Acre ☉—Round heads

63 days. Has all the wonderful characteristics of our Improved Copenhagen Market, but the heads are a trifle smaller and mature 9 days earlier. ## YELLOWS-RESISTANT CABBAGE

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experiment Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following highly yellows-resistant varieties:

- 191 Early Jersey Wakefield See page 82.
- 172 Improved Allhead Select See page 82.
- 170 Marion Market See page 82.
- 181 Golden Acre See page 82.
- 190 Wisconsin All Seasons See this page.
- 174 Wisconsin Hollander See page 84.

## How to Grow CABBAGE

For earliest crop, start early and midseason cabbage seed in hot bed or house; for medium early cabbage, seed may be sown in a cold-frame or open-ground seed bed in early spring. Sow late cabbage for winter use in a seed bed outdoors when soil has become thoroughly warm. A pkt. will produce about 250 plants, an oz. about 2000 plants. Days to maturity are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil.

# Late or Winter CABBAGE

## 195 Burpee's Surehead ☉

The special Burpee strain we offer is an improved one, uniform and very desirable where a large late cabbage with a flattened head is required. Short stem, small frame, with heads weighing 7 to 10 lbs., 10 to 12 in. in diameter and 6 to 7 in. deep. Good, reliable keeper. Pkt. 15¢; 1/2 oz. 35¢; oz. 60¢; 1/4 lb. \$1.80

## 193 Penn State Ballhead ☉

110 days. Special strain of Danish Ballhead selected for solidity, uniformity and heavy production. Heads are almost globular, 6 to 7 in. deep, 7 to 8 in. across and weigh 6 to 7 lbs. Excellent keeper. Medium stem. Pkt. 15¢; 1/2 oz. 45¢; oz. 85¢; 1/4 lb. \$2.40

Pkt. 15¢; 1/2 oz. 40¢; oz. 75¢; 1/4 lb. \$2.25

## 174 Wisconsin Hollander (Yellows-Resistant)

120 days. Selected for resistance to "yellows" and is recommended for use only on yellows-infested land. Heads are large, round, flattened on top but quite deep and weigh 5 to 7 lbs. each. Good keeper. Heavy cropper. Vigorous plants.

Pkt. 15¢; 1/2 oz. 40¢; oz. 75¢; 1/4 lb. \$2.10

*Perfection Drumhead Savoy*

# SAVOY CABBAGE

**209 Perfection Drumhead** 90 days. Popular on account of its milder, more pleasing flavor than regular cabbage. The large round heads are somewhat flattened, 9 to 10 in. across, 7 to 8 in. deep and weigh 6 to 7 lbs. each. Outer leaves are deep green, crumpled or savoyed; inner leaves lighter green, which color is retained when cooked.

Pkt. 15¢; 1/2 oz. 35¢; oz. 60¢; 1/4 lb. \$1.80

# RED CABBAGE

**196 Mammoth Red Rock** 110 days. Sure cropper and used extensively for boiling and pickling. The tight, deep purplish-red heads are round, flattened on top, solid as a rock, and often weigh 6 to 8 lbs. each. Store well as they have good keeping qualities. Widely used.

Pkt. 15¢; 1/2 oz. 45¢; oz. 75¢; 1/4 lb. \$2.25

# CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

**214 Chihli ☉** 73 days. An early, elongated heading Chinese Cabbage, growing 18 to 20 in. tall and about 3 1/2 to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are very crisp and tender; broad, smooth and fringed at the edges. Extensively grown for market and roadside sales because the large, attractive heads sell readily; it is the most popular for the home garden where the longest head is wanted.

Pkt. 15¢; 1/2 oz. 30¢; oz. 55¢; 1/4 lb. \$1.55

**212 Pe-Tsai** 78 days. Large Cos Lettuce-like heads 12 to 14 in. tall, the inner leaves tightly folded around the thick, pure white heart which is well blanched, tender, juicy, and has an agreeably pungent flavor either eaten raw like lettuce or cooked like cabbage. Taller growing, larger head than Wong Bok. Desirable for the home garden or market.

Pkt. 10¢; 1/2 oz. 30¢; oz. 50¢; 1/4 lb. \$1.50

**211 Wong Bok** 78 days. Short, broad, tightly folded, well-blanching heads, 8 to 10 in. high. Excellent quality, crisp and delicious; tender and juicy. Hearts are ideal for serving like lettuce; outer leaves cooked like cabbage. Good for home gardens.

Pkt. 10¢; 1/2 oz. 30¢; oz. 50¢; 1/4 lb. \$1.50

# Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when

used with cucumbers, onions, peppers, etc., in mustard chow-chow. Burpee's cauliflower seed is produced under ideal climatic conditions on our Floradale Farms and is the equal of that grown anywhere in the world. We offer the best six varieties.

*Burpeeana  
Cauliflower*

## 253 Burpeeana ♂—*Very select*

78 days. Exceptionally choice extra early strain of Super Snowball as offered by Burpee. It stands out as the most valuable cauliflower for the home gardener, freezing, as well as the market grower. Burpeeana is dependable, with the heads forming all at one time, showing a uniformity of size, shape and type that is truly astonishing. Beautiful, well-rounded, compact, pure white heads protected by many long jacket leaves.

Pkt. 30¢; ¼ oz. \$1.55; ½ oz. \$2.90; oz. \$5.50

## 250 Improved Super Snowball

82 days. In sections where the Snowball type of cauliflower is preferred, or matures to best advantage, growers should try this strain. Plants are uniform and set a crop of pure white, smooth heads which are noted for their tight curds. Desirable for freezing.

Pkt. 30¢; ¼ oz. \$1.55; ½ oz. \$2.90; oz. \$5.50

## 252 Improved Holland Erfurt

85 days. An especially fine strain of this important variety; very popular in leading cauliflower sections. Plants are fairly short stemmed, really uniform in maturity; heads are flat, hard and compact, and definitely of the true Erfurt type. Suitable for freezing.

Pkt. 25¢; ¼ oz. \$1.50; ½ oz. \$2.75; oz. \$5.25

## 245 Burpee's Dry Weather

95 days. Though cauliflower does best in a cool and moist season, we have in Dry Weather a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, try Dry Weather.

Pkt. 25¢; ¼ oz. \$1.00; ½ oz. \$1.90; oz. \$3.70

## 251 Early Snowball—A ♂

60 days. Plants small to medium in size, erect to semi-spreading, with large, wavy, medium green leaves. Heads are very firm, deep globular in shape, white in color, and of excellent quality. Because heads can be cut in a relatively short time, it is widely used.

Pkt. 25¢; ¼ oz. \$1.50; ½ oz. \$2.75; oz. \$5.25

## 258 Veitch's Autumn Giant

130 days. The finest late cauliflower; it produces immense compact white heads, 8 to 10 in. in diameter. Like all late varieties, it is recommended for fall crop only and in regions where cauliflower is sure to thrive.

Pkt. 20¢; ¼ oz. 90¢; ½ oz. \$1.75; oz. \$3.25

### How to Grow CAULIFLOWER

Cauliflower is best grown as a fall crop in the greater part of the United States, although in regions where summers are reasonably cool, sowings may be made indoors or under glass, 30 to 40 days before it is time to set plants in the garden. For a main or fall crop, sow the seed in a specially prepared seed bed or coldframe about 4 months before your first expected frost. When plants are ready to be set in the garden, space them 1½ to 2 ft. apart, in rows 2½ to 3 ft. apart. A packet of seed will produce about 150 plants; 1 oz. 4000 plants. Days to maturity given in descriptions are from the time the plants are set out in the garden.

### WINTER CAULIFLOWER

155 **St. Valentine Broccoli** 150 days. Large, solid, white heads identical to cauliflower. Too late-maturing for general Eastern culture. Recommended as a winter crop, especially in the Pacific Coast area, where season is long and weather is cool.

Pkt. 15¢; ½ oz. 45¢; oz. 75¢; ¼ lb. \$2.25

**Burpee's Goldinhardt  
Carrots**  
Roots will grow  
5 to 5½ in. long

# CARROTS

May be used at different stages of growth but are at their best if eaten when half grown or smaller. There are varied sizes and shapes to suit your purposes as well as soil conditions; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soils to Burpee's Improved Long Orange for deep

mellow soils—the popular medium length carrot for general purposes is Burpee's Goldinhardt. There are many ways to use carrots—cook alone, use in soups, stews, chowders with other vegetables or along with roasts. Raw carrots may be served as a relish when chilled and cut lengthwise in slender strips; splendid when shredded in salads and a refreshing appetizer when served as chilled juice.

*Tender-  
sweet*

*Danvers  
Half Long*

## 224 Burpee's Goldinhardt

70 days. Our special strain of Red Cored Chantenay. Selected for uniformity, trueness to type, deep exterior and interior color, and a small, indistinct core. Roots are 5 to 5½ in. long and 2¼ in. thick at the shoulder, very gradually tapering to an abrupt stump end; skin is orange-scarlet. Flesh is fine grained, tender, and of a delicate, sweet flavor. Popular with canners, commercial growers, and home gardeners because of heavy yield, all-round excellence and the bright golden orange flesh clear to the center. None better for freezing. Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

## 217 Early Golden Ball — "French Forcing"

60 days. Earliest of all carrots. Excellent for an early crop outdoors or for forcing in frames because of the small size of its tops and the shortness of its roots, which are almost round, from 1½ to 2 in. in diameter, sometimes top-shaped, sometimes broader than long, and rounded at the base. Bright orange skin and exceptionally sweet orange flesh. Useful on heavy or shallow soils where long varieties may become rough or misshapen. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.50

## 232 Tendersweet — All-America Winner

75 days. A long, bunching type which requires a deep soil for best development. When fully mature the roots measure 1½ to 2 in. at the shoulder and 8 to 10 in. long, and taper to a blunt end. The skin is colored rich orange-red and the interior is a deep orange with indistinct core. The quality is excellent and the texture crisp and brittle. The foliage is distinct, as the leaf stalks are tinged purple. Excellent for home, market and storing. Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

## 225 Danvers Half Long — For home and market

75 days. Well-known main-crop or late carrot of great uniformity. The deep orange-red roots are 7 to 7½ in. long and 2 to 2½ in. in diameter, tapering gradually toward the blunt end. The flesh is bright orange, fine grained, tender, rich in flavor, and very sweet. Popular for freezing, home garden and for market; valuable for winter storing, feeding stock and none better for table use. Very productive; widely adaptable in all soils. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.50

### How to Grow CARROTS

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall and the best for winter storing. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

## 223 Burpee's Oxheart Carrot

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 5 to 5½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet, and of delicious flavor. Because of their shape they are easy to harvest and do well in shallow or heavy soils where longer carrots often fail to make attractive roots. Fine for home use and busheling rather than bunching. It is a good cropper and keeper.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.50

## 221 Chantenay or Model—Well known, all-purpose carrot

70 days. Attractive, deep orange, half-long roots, 5½ in. long and 2¼ in. thick at the top, gradually tapering toward the bottom to a distinctly stump end. The flesh is a beautiful rich orange, tender, of fine texture, and very sweet. Excellent for the home garden and sells readily on all produce markets; good shipper and winter keeper.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.50

## 229 Burpee's Improved Long Orange

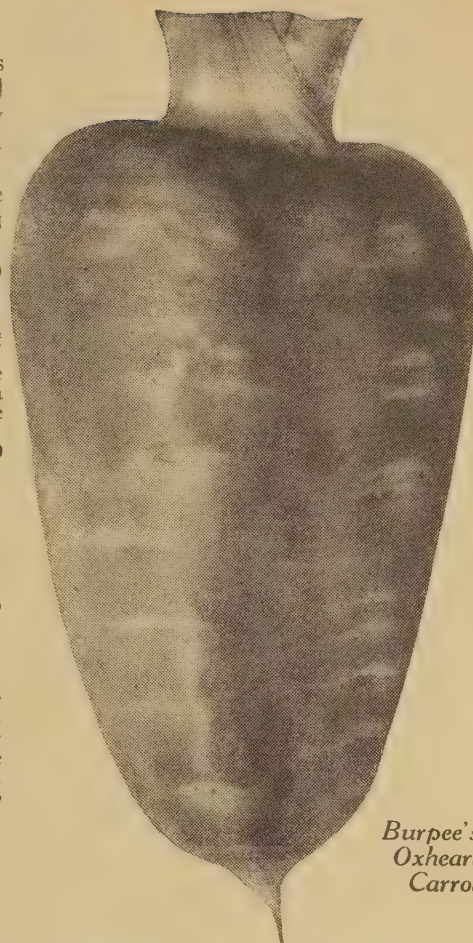

85 days. If left to reach full growth, roots will measure 10 to 12 in. long and 2 in. thick at the shoulder, slightly tapering to a point; deep orange skin and tender, tasty bright orange-red flesh. A heavy cropper and a good keeper. Also used for stock feeding.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.50

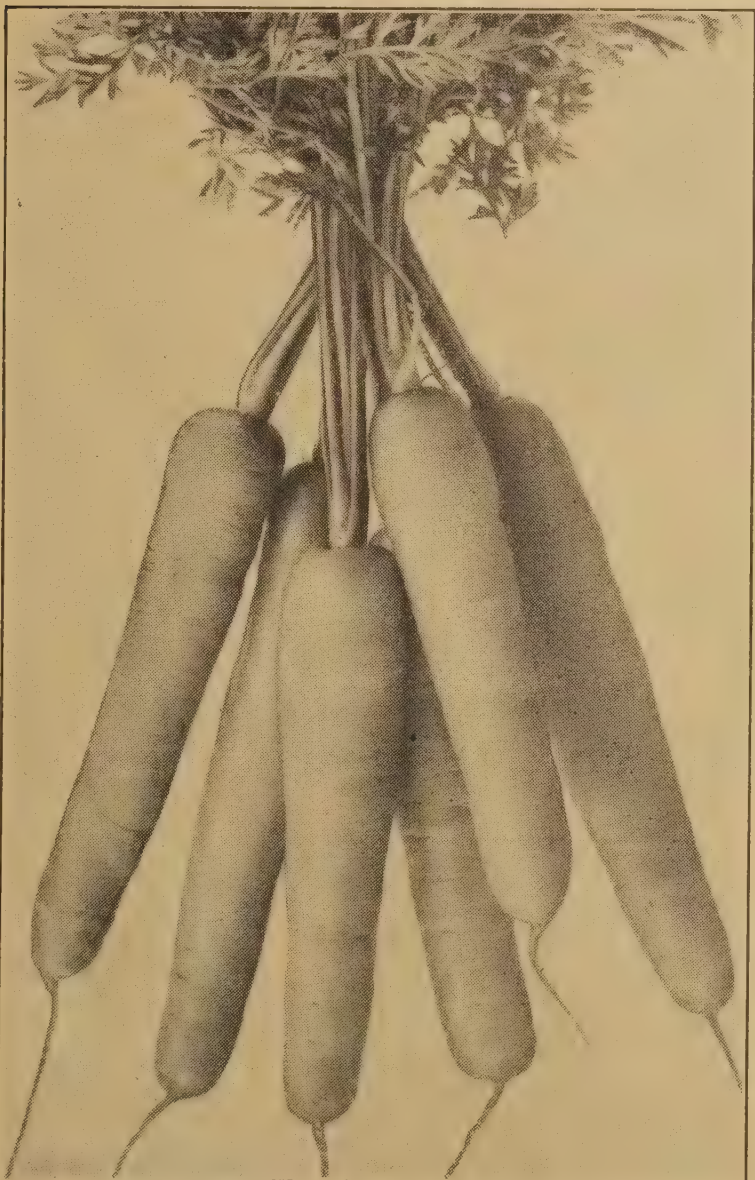

## 234 Imperator—Streamlined favorite; All-America Winner

75 days. An exceptionally heavy yielder; always smooth and uniform. The roots grow 8 to 9 in. long, 2 in. across shoulder, tapering to a rather blunt end. Skin is rich orange-red; flesh is very deep orange. In demand for home gardens, freezing and especially by market gardeners, as it has the shape, size, and color to show to advantage, and the sweet, tender, fine-grained flesh of rich flavor to further recommend it. Ideal buncher.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

## 218 Amsterdam Forcing

65 days. While especially valuable for forcing, it is desirable for growing outdoors, for either home or market. Roots are bright salmon-red, 6 in. long, 1 in. thick, blunt ended, with small tap-root. Flesh is crisp, sweet and extremely fine-grained. Desirable for freezing.

## 240 Large Yellow Belgian

*For stock feeding only*

100 days. Very productive carrot with roots measuring 18 in. long, broad at the shoulder, and gradually taper to a fine point. The skin below the ground is a light orange, but above the soil surface it is green. Will yield heavily, especially in deep, mellow soil. Of high value for feeding cows, horses and sheep during the fall and winter. Easy to harvest as the large size roots grow partially above the surface of the soil as they become fully developed. # Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook, Giant Pascal, and Utah, all famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

## 272 Burpee's Fordhook ☉

130 days. Burpee's Fordhook Celery is, without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. We offer our improved strain.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$4.00

## 263 Cornell 19 ☉—Outstanding early, self-blanching

120 days. Early, vigorous, self-blanching, and resistant to fusarium yellows. Plant 20 to 23 in. tall with thick heart, and rounded, fairly smooth, fleshy stalks. Combines the high quality of Utah with the self-blanching characteristics of Golden Self-Blanching. Highly recommended as a main-crop variety for all celery growing regions and as a midwinter crop in Florida.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$4.00

## 267 Easy Blanching—Stalks easily blanched to white

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, free from any fiber or strings, and of extra-fine flavor. Resembles Golden Self-Blanching but stalks blanch white instead of yellow.

Pkt. 15¢; 1/2 oz. 50¢; oz. 90¢; 1/4 lb. \$2.70

## 260 Burpee's Golden Self-Blanching ☉

115 days. This is the American-grown seed produced from the dwarf French-grown stock. Grown extensively by home gardeners as well as by market growers. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. Pkt. 15¢; 1/2 oz. 65¢; oz. \$1.20; 1/4 lb. \$3.75

## 266 White Plume—Recommended for fall and early winter

112 days. The earliest and the most easily blanched celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. Quality is good. Not recommended for late winter storage.

Pkt. 10¢; 1/2 oz. 45¢; oz. 85¢; 1/4 lb. \$2.55

## 282 Giant Pascal—Known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall and thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction.

Pkt. 15¢; 1/2 oz. 50¢; oz. 95¢; 1/4 lb. \$2.75

## 268 Golden Plume or Wonderful

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; the flavor is distinctly nutty and rich. The many good qualities of this widely grown early yellow celery commend it to all growers for home and market.

Pkt. 15¢; 1/2 oz. 60¢; oz. \$1.10; 1/4 lb. \$3.30

## How to Grow CELERY

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than 1/4 in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from field setting of plants.

## 276 Utah or Golden Crisp ☉

130 days. An excellent green celery for fall use or winter storing. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, and when blanched are pure white, crisp, and of the most delicious flavor.

Pkt. 15¢; 1/2 oz. 50¢; oz. 95¢; 1/4 lb. \$2.85

## 275 Winter Queen—General favorite

120 days. Resembles Golden Self-Blanching in height and habit, but leaves are a rich green color. The dwarf plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts which are tender, crisp and of excellent flavor.

Pkt. 10¢; 1/2 oz. 45¢; oz. 85¢; 1/4 lb. \$2.55

## Celeriac

### (Turnip-Rooted Celery)

293 Giant Prague 120 days. Leaves are not edible, only the large, thick root, which has a flavor similar to celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. May be used when it has grown about 2 in. across; fully grown roots may average 4 in. in diameter. Grow as you would celery except that it does not require hilling or blanching.

Pkt. 15¢; 1/2 oz. 50¢; oz. 90¢; 1/4 lb. \$2.60

# Burpee's Hybrid SWEET CORN

Hybrid Corns are of special value to market growers, canners and to many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to have ears over a long period, plant two or more hybrids of different maturity dates. It is not advisable to save seed from plantings of hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed each year.

## 309 Golden Cross Bantam — *Light golden yellow*

85 days. Most widely used of all the hybrids for canning, freezing, market, shipping and the favorite home garden main crop yellow hybrid. Usually two ears,  $7\frac{1}{2}$  to  $8\frac{1}{2}$  in. long, each with 10 to 14 rows of sweet light golden yellow kernels, are produced to a stalk 7 to 8 ft. high. Quite uniform in maturity and ear characteristics.

Pkt. 15¢;  $\frac{1}{2}$  lb. 40¢; lb. 70¢; 2 lbs. \$1.30; 5 lbs. \$3.10

The ears average  $8\frac{1}{2}$  in. in length, taper towards tip, with 16 to 20 rows of clear white, compact kernels of good quality. To enjoy Sweet Corn at its best, it should be eaten as soon as possible after ears are pulled; any delay causes loss of sweetness and quality. At what stage to pull corn is a matter of choice, although most persons prefer the ears in milk stage if to be eaten from the cob. For corn-fritters or other dishes, ears may be more matured. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated varieties.

### How to Grow SWEET CORN

Plant seed after all danger of frost has passed and the soil has become thoroughly warm in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 9 to 12 in. apart. Some prefer to sow 5 or 6 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 to 4 plants to remain in each group, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make additional sowings when the preceding planting is up and well started; allow enough time for your last planting to mature before the first expected frost in your locality. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or so-called "hills."

# Burpee's CUCUMBERS

May be harvested at almost any size depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers in the past, plant Burpee Hybrid this year. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is a top-notch.

Fruits are 9 to 11 in. in length and 2 to 2½ in. in diameter when mature, tapering symmetrically toward both ends; flesh is firm and thick, with few seeds. **National  
Pickling**

**Explanation of White Spine and Black Spine** Cucumbers are divided into two families, "White Spine" and "Black Spine." ## How to Grow CUCUMBERS

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are highly beneficial. Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. To save garden space and make for easier gathering, cucumbers may be grown on a fence or trellis. In descriptions, we refer to "White Spine" and "Black Spine" cucumbers; explanation of these two different types is given below.

## EGGPLANT

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss; they are too old when skin becomes dull. Use when young, at which stage the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost.

A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or pans, 8 to 9 weeks before the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until usable or marketable fruits are ready.

### 419 Burpee Hybrid — New for 1947

They are oval, medium-sized, and of a good dark purple. Most fruits do not touch the ground. More resistant to drought and disease than any commercial variety. Shown in color on back cover of this book.

## Burpee's CELTUCE

Combines the uses and flavors of CELery and LetTUCE

**290 Burpee's Celtuce** belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtuce stalks are to be eaten raw or cooked, you remove the lower leaves and then cut off all the outer skin and fibrous layers down to where they become light green and tender. Cooked celtuce stalks have a pleasing, mild flavor suggestive of celery. Young leaves have 4 times the Vitamin C content of head-lettuce leaves.

The sweet, fine-grained flesh has the combined flavor not unlike that of cauliflower and turnip. Sow the seed in rows 12 to 18 in. apart early in the spring and cover ½ in. deep. Thin plants to stand 6 in. apart in the row. For a continuous supply, sow every two weeks until hot weather. For fall use, sow seed in midsummer. Excellent for home and market garden, also for forcing. A pkt. will sow about 30 ft. of row; an oz. 250 ft.

It belongs to the onion family, but has a decidedly sweet flavor. Sow seed in early spring in rows 12 to 18 in. apart and cover with ½ in. of fine soil. Thin to 4 to 6 in. apart in the row. Draw earth up around plants when cultivating to blanch as you would celery. Desirable for home or market. A pkt. will sow 25 ft. of row; ½ oz. 100 ft. Pkt. 15¢; ½ oz. 55¢; oz. \$1.00; ¼ lb. \$3.00

*Jumbo Virginia Peanuts*

# PEANUTS *Top ranking protein foods*

Roasted peanuts, salted peanuts, peanut butter and peanut candies, are well known to all of us. Have you ever tried them baked as you would beans? Leave skins on or take them off; they are, however, more palatable if skins are removed.

For best results select warm, light or sandy soil rich in lime. Plant in rows 2½ to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the rows, or if planted in the hulls, place them 16 to 18 in. apart in the row. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. according to method used in planting. Peanuts are shipped in the hull to prevent damage to the tender seeds. They can be planted either shelled or whole.

**712 Jumbo Virginia 120 days.** Most productive, extra large peanut of rich flavor, with 2 or 3 large kernels to the pod. The vines spread 3½ to 4 ft. across; valuable fodder. **Pkt. 15¢; ½ lb. 40¢; lb. 70¢**

Sow seed in early spring in rows 1½ ft. apart and cover with 1 in. of fine soil. Thin the seedlings to stand 4 to 5 in. apart. They are hardy and some may be left in the ground over winter for early spring use. For winter use, dig roots in the fall and store in moist sand in a cool cellar. The storage place should be cool but not so cold as to cause freezing and not too dry. Best roots are grown on rather light soil but good results can be had in ordinary soil if it is dug or plowed deep and mellow. **7056—3 Pkts.**, one each of these 3 distinct kinds (value 40¢) for only **30¢**

### How to Grow LETTUCE

Lettuce grows best during the cool seasons of the year, and in a rich, moist, cool soil, so that the seed should be sown thinly in the spring as soon as the soil can be worked, in rows 1 to 1½ ft. apart, and covered with ½ in. of fine soil. Several successive sowings may follow about two weeks apart, then discontinue sowings until late summer when they may be made to provide lettuce during the fall. Thin heading varieties to stand 1 ft. apart; loosehead or cutting varieties, 4 to 6 in. apart. A pkt. will sow 50 ft. of row; 1 oz. 300 ft.

# MUSKMELONS (CANTALOUPE)

To really enjoy a muskmelon, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma.

## How to Grow MUSKMELONS

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills", —a term that is misleading to many gardeners.

## How to Plant ONION and GARLIC SETS

**Onion Sets.** Make furrows about 1 in. deep, into which lightly press the sets but do not cover them. Space sets 3 in. apart in rows 12 to 24 in. apart, depending on method of cultivation to be used.

**Garlic Sets.** Each set or bulb is made up of several sections called cloves held together by a thin paper covering. Before planting, separate each set and plant the cloves 4 to 6 in. apart in rows 1½ to 3 ft. apart. Cover with 1 in. of fine soil.

## 9975 GARLIC SETS

*Extra select California grown*

Garlic is the most pungent of the onion family, and is used for flavoring soups, stews, sausages and salad dressings. Sets are easily grown and may be kept without any trouble for use during the winter. We supply mother bulbs as pictured above; it is necessary to separate the cloves before planting which is very easily done.

# Burpee's ONIONS

*Ebenezer  
Onion*

For flavoring salads, raw or cooked vegetables, soups, sauces, stews, etc., or served as a separate vegetable, onions are universally popular. A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. For green onions or large onions, you have your choice of sowing seeds or planting sets. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the descriptions.

### How to Grow ONIONS FROM SEED

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 103 for How to Grow Onions from Sets; we offer both the white and yellow.

Evergreen Bunching Onion

## 710 Evergreen Long White Bunching—Bulbless

They are produced in clusters of four to nine and are twice the size of ordinary bunching onions. Perfectly hardy. Seeds sown in the spring or summer will provide mild, green scallions late in the fall or, if wintered over, very early the following spring.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢; ¼ lb. \$2.75

## 673 Crystal White Wax—Sweet, mild, delicate flavor

Sweet Spanish Onion

## 682 Sweet Spanish—Yellow skin UTAH STRAIN

They are remarkably uniform, have light yellow skin and pure white, firm, crisp and tasty flesh. Although no onions of this type will keep as long in storage as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. ## 735 Mammoth Podded Extra-Early ☉

60 days. A large-podded, smooth-seeded, extra-early pea, adapted to home and market because of early maturity and large yields. Pods are broad, round, blunt, 3 in. long, medium green and contain 8 large peas of fine quality. Vines grow 30 in. high and freely produce their pods for a number of days. Such large pods and tall vines are usually found in later maturing varieties. Young, fresh peas are truly delicious.

## 731 Burpee's Best Extra-Early—Quite hardy

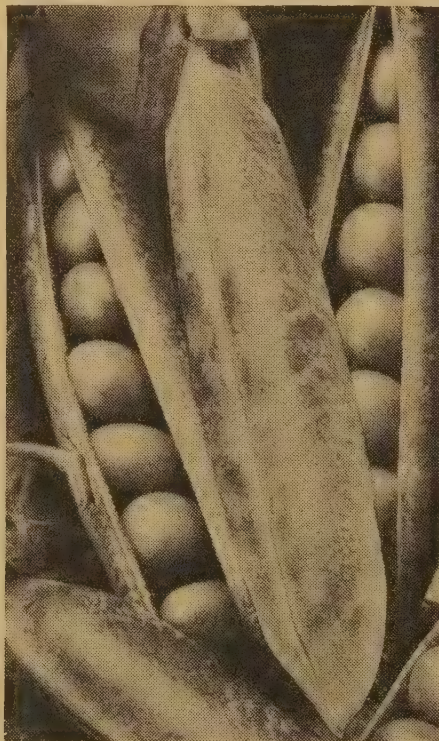

60 days. A favorite medium-tall, extra-early, smooth-seeded variety. The 2½ ft. vines are very productive, carrying an abundance of well-filled pods containing 5 to 7 small, round, light green, luscious peas. The pods mature over a long season, which makes it especially suitable for home use. The early maturity and hardiness of this variety make it popular too for local market sale. Pods are blunt ended, light green, 2½ to 3 in. long. Vines, because of their medium height, do not require supports.

Pkt. 10¢; ½ lb. 25¢; 1b. 45¢; 2 lbs. 85¢; 5 lbs. \$1.85

## 739 Alaska—Also known as Earliest of All; used extensively

## 732 Radio ☉

58 days. Great favorite, due to its superb quality and most amazing productiveness. Seed is smooth, showing slight dimples. Because of its dwarf habit, Radio is ideal for the home garden; also used for local markets.

7104—1½ Lbs. (½ lb. of each variety, value 85¢) for only 75¢

7105—3 Lbs. (one lb. of each, value \$1.45) for only \$1.30

## How to Grow PEAS

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports for the tall-growing varieties. A pkt. will sow 20 ft. of row; 1 lb. 100 ft.

# Wrinkled-Seeded Early Peas

Wrinkled-seeded peas, both early and main crop varieties, are favored by many home gardeners, as well as market growers and canners, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool.

To enjoy the sweet, delicious flavor of peas, pick pods before they become fully developed and while still green; then cook as soon as possible, because they lose flavor rapidly after picking, the sugar changing to starch. Grow your own and get the real, sweet flavor of garden fresh vegetables at their very best.

## EDIBLE-PODDED or SUGAR PEAS

### PODS ARE COOKED LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. The following varieties are entirely free of fiber or parchment. Vines of the taller growing varieties should be given support of string or brush to climb upon for best results.

## 815 Mammoth Melting Sugar ©

# Burpee's SPINACH

*Bloomsdale  
Long Standing*

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. The New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen during the winter?

*Nobel  
All-America  
Silver Medal  
Winner*

## 1000 Nobel ☉—Best smooth, thick leaved spinach

49 days. The largest as well as the heaviest producer of all, with thick, green leaves that are rather smooth and quite succulent. Very crisp, tender, of extremely delicious flavor. Stands long before bolting.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

## 995 Bloomsdale Reselected—Hardy

45 days. Distinct improvement over the old standard Bloomsdale Savoy. The leaves are of heavy texture, very thick, dark green, heavily crumpled and savoyed. A perfectly hardy variety which may be used for early spring sowing or for planting in the fall to winter over.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

## 1003 Virginia Blight Resistant

42 days. An improved selection, the leaves of which are almost as curled as Reselected Bloomsdale; they are large, dark green, extremely crisp, tender and of upright growth. Quick grower, so should be used as a first-early spring crop. It is also most satisfactory for fall and winter planting, and since it shows considerable cold-resistance, it may be successfully wintered-over as far north as Maryland. For sections where mosaic is prevalent, we recommend this highly desirable variety.

Pkt. 15¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

## 990 Viroflay—Thick leaf, very large

Pkt. 15¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.65

## 1005 New Zealand ☉

### The Hot Weather or Everlasting Spinach

70 days. When prepared for the table, it so greatly resembles spinach in appearance and flavor that most persons will not be aware of the difference. It makes strong plants which resist heat and produce an abundance of rich green leaves that can be picked repeatedly all during the summer and fall. As the plants send out fresh growth continuously after being cut, a supply of "greens" may be had until frost destroys the plants. Both the young stem tips and leaves are fleshy and brittle and of the finest quality when cooked. Plants attain a spread of 4 ft. when fully grown and thrive in any good soil in a warm location.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.80

## 999 Bloomsdale Long Standing ☉

48 days. Quick-growing hardy spinach much planted for home and market use as well as for canning. The glossy dark green leaves are intensely crinkled, in addition to being of a very heavy texture. Valuable for spring sowing or planting in the fall. Remains in the rosette stage for a long time without bolting. An extremely heavy yielder.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

### How to Grow SPINACH

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. At each picking, remove every other plant, which will allow room for remaining plants to fully develop. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft.

# Burpee's PEPPERS

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they are of different forms,—some blocky (Burpee's Fordhook), some heart-shape (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe except Oshkosh which turns to bright yellow. Pepper plants will produce more fruits if they are kept picked when green in color.

Hot fleshed peppers vary considerably in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling both in the fresh state and when dried.

## 847 Burpee's Early Pimento ☉

65 days. Heart-shaped, pendent, and when mature the fruits are  $3\frac{1}{2}$  in. long and  $2\frac{1}{2}$  in. in diameter at the top, smooth, dark green, turning bright red when ripe. The flesh is  $\frac{1}{4}$  to  $\frac{5}{16}$  in. thick—a heavy walled pepper which is sweet and mild at all stages. Most desirable for home, market, freezing and for making canned pimentos. ### How to Grow PEPPERS

Sow seed in a hotbed or indoors in shallow boxes, pots or pans of rich soil, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. When the soil has become warm, set the young plants in the garden, 18 to 24 in. apart in rows 2 to 3 ft. apart. Peppers do best in a light, sandy, moderately rich soil. A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants.

## Burpee's PUMPKINS

The very mention of the word "pumpkin" reminds one of the sweet, delicious flavor of pie. Fruits may be used in the fall or stored in a dry, moderately warm place for use during the winter; the flesh may also be canned. Some varieties of winter squashes, especially Boston Marrow, commonly known as the Basket Pumpkin, are generally grown for pumpkin pie instead of the true pumpkins. The best pumpkin for general use whether in the home garden, market garden or roadside sales is Small Sugar.

# Burpee's Earliest RADISHES

*Burpee White Radishes,—shown in color on inside back cover*

## 888 Burpee White ☉

*New for 1947*

25 days. Exceptional tenderness, mild flavor, crispiness, and remaining long in edible condition, are most outstanding qualities of this new white radish.

Burpee White Radishes, when young, are nearly round, juicy and sweet with pure white skin and flesh. Roots become flattened in shape as they grow, the diameter increasing with age. Best eating stage is when they measure  $\frac{3}{4}$  to 1 in. across. They are still crisp, mild and tender, however, when 2 in. across, grown from spring sown seed.

Chemical analysis made by a reputable laboratory proved its superiority over red varieties in respect to available nutrients and low fiber content.

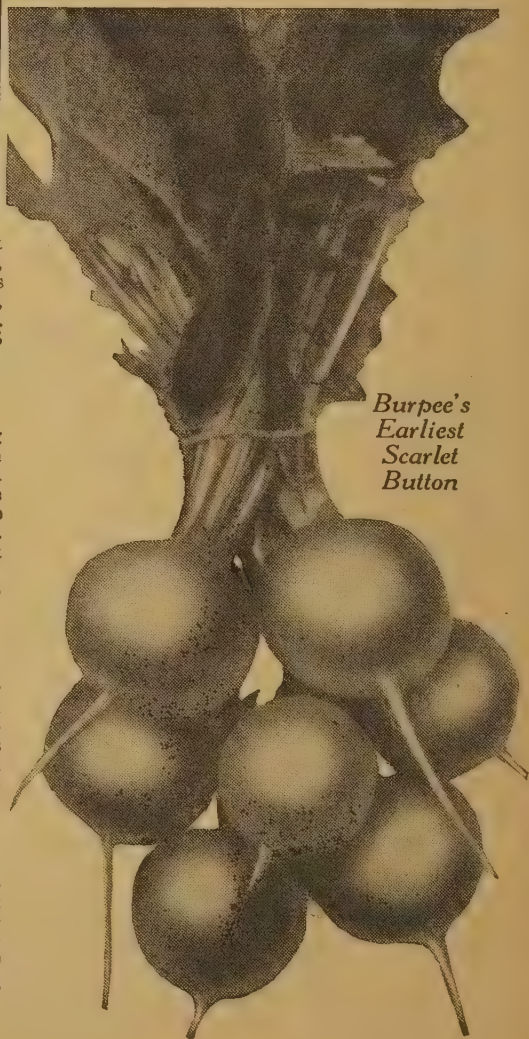

In blindfold tests made by us last spring, Burpee White, in comparison with leading red radishes, was selected by four out of five persons for its distinctive quality and flavor.

Pkt. 25¢; oz. 60¢

## 883 Vick's Scarlet Globe

24 days. Olive-shaped, bright scarlet radishes, 1 in. in diameter. It is crisp and tasty, with fine white flesh and a medium-size top; right for bunching. Good for forcing and does equally well outdoors for the market or home garden.

Pkt. 15¢; oz. 30¢;  $\frac{1}{4}$  lb. 90¢;  $\frac{1}{2}$  lb. \$1.65

*Burpee's Earliest Scarlet Button*

## 877 Burpee's Earliest Scarlet Button ☉

25 days. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. Earliness, bright scarlet color, and unusually brittle and delicious quality make it most desirable for home gardeners and the larger growers as well, either for growing outdoors or under glass; small tops are just right for bunching.

Pkt. 15¢; oz. 30¢;  $\frac{1}{4}$  lb. 90¢;  $\frac{1}{2}$  lb. \$1.65

## 886 Crimson Giant Globe—Big, round radishes

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, 2 in. in depth,  $1\frac{1}{2}$  in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. It is a very popular variety, of large size, finest quality and remains edible for a long time. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. This variety should be thinned to a wider spacing than smaller varieties; we suggest leaving at least 2 in. between plants in the row for full development of large roots.

Pkt. 10¢; oz. 30¢;  $\frac{1}{4}$  lb. 90¢;  $\frac{1}{2}$  lb. \$1.55

## 890 Comet ☉ —Scarlet, long standing; All-America Winner

25 days. Bred to meet the increasing demand for an early radish that has the same good qualities as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; radishes are round, with an occasional olive-shaped, attractive, bright scarlet and small tap-roots. For eating and keeping qualities Comet is surpassed by none. Ideal for home and market gardens because these radishes will remain crisp and solid for a long time.

Pkt. 10¢; oz. 30¢;  $\frac{1}{4}$  lb. 90¢;  $\frac{1}{2}$  lb. \$1.55

## 907 French Breakfast —Deep olive-shaped to oblong

23 days. Oblong or deep olive-shape,  $1\frac{3}{4}$  in. long and  $\frac{5}{8}$  in. wide. Bright rose-scarlet skin, shading to clear white in the lower portion. The flesh is white, firm, and crisp; juicy, mildly pungent and tender. A quick grower and exceedingly popular for home or market as well as for forcing. Tops are very short, with radishes showing partly above the ground. Excellent quality.

Pkt. 10¢; oz. 30¢;  $\frac{1}{4}$  lb. 90¢;  $\frac{1}{2}$  lb. \$1.50

## 910 Burpee's Red Giant Radish

29 days. This remarkable radish combines large size with tender crispness and mild flavor. The roots, even though they grow to the enormous size of 1½ in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red; the flesh is pure white. Grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when ½ in. in diameter or ten days later when roots measure 1½ in. or more—it's always crisp, sweet and tender. An ideal home garden variety and may be used for bunching either young or when fully grown. Highly recommended.

Pkt. 15¢; oz. 35¢; ¼ lb. 95¢; ½ lb. \$1.75

## 938 White Icicle — *Finest and most popular of all long radishes*

28 days. Skin is pure white, thin and tender; flesh is icy white, crisp, juicy, perfectly mild and of a delightfully sweet flavor with just enough pungency to appeal to the appetite. Remains solid, being fully as good when 1 in. across as when only ½ in. The roots grow 5 in. in length and are the shape of an icicle, straight and free from side roots. Splendid for either spring or fall use whether for home or market. Thorough and deep soil preparation is advisable to secure well-formed, uniform roots. It is suited for forcing.

Pkt. 10¢; oz. 30¢; ¼ lb. 95¢; ½ lb. \$1.65

## 895 Cavalier — *Scarlet skin*

25 days. Roots are highly colored, oblong-globe shape, bright scarlet; firm, white flesh. The short tops make it especially suitable for growing on muck land as well as upland soil. Our strain of this important variety has been rigidly reselected and represents an elite stock suitable for use by the most critical home and market trade. Fine for forcing.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

## 893 Sparkler — *Attractively colored; scarlet-red heavily tipped white*

Small round roots, 1¼ in. in diameter, with bright scarlet top, a clear white base, and small slender tap-root. The juicy flesh is pure white and of an agreeable snappy flavor. A very attractive radish for bunching or market; an excellent variety for the home garden, greenhouse and spring frame forcing. Fine contrast to the all-red varieties especially in market. Always attracts attention.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

Small, bright red and as round as marbles, ¾ in. in diameter, with thin, bright red skin. The flesh is pure white, crisp, and delightfully snappy. Tops are short, making it desirable for growing under glass. The quicker they are grown, indoors or out, the crisper their flesh and the more delectable their flavor.

Pkt. 15¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.65

### How to Grow RADISHES

Sow the seed of the earliest and midseason radishes as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering ½ in. deep. Thin small varieties to stand 1 to 1½ in. apart in the row; larger varieties, 3 to 4 in. apart. Make additional plantings when the preceding planting is up and well started; these may be made until early summer, then resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

## Midseason or Summer Radishes

The following varieties require more time to mature than the spring radishes so that they are becoming ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. Flesh is mildly pungent. We suggest a deep and thorough preparation of the soil to obtain the best roots.

### 928 Early Long Scarlet Short Top

30 days. The very best long, brittle, red radish, almost 6 in. in length, and matures in about 4 weeks. Skin is an attractive bright scarlet-red; the tender flesh is icy white and of the finest flavor, somewhat more pungent than Icicle. Grow partly above ground which makes pulling easy.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

**959 White Strassburg** 40 days. Roots are mildly pungent; 4½ to 5 in. long and 2 in. in diameter. Skin and flesh are white. Crisp, tender and of an icy texture. Widely grown for home garden use and by market gardeners in some sections for local sales. Remains long in good condition.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.50

## Winter Radishes

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 3 best kinds. Give plants plenty of room by thinning out when young to stand 3 in. apart.

### 963 White Chinese or Celestial

60 days. Smooth, pure white roots, 6 to 8 in. long, with a diameter of 3 in. Flesh is crisp, juicy, icy white and of mild flavor—the least pungent of all winter radishes. They remain succulent for a long time.

*Early Golden Summer Crookneck*

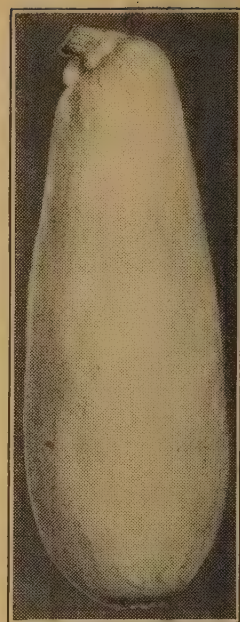

# Summer SQUASH

In descriptions, we give the average size of fruits when fully grown. For the best eating, summer squashes are used when immature, usually when very small; in fact, the Early White and Yellow Patty Pans are delicious if cooked whole when very tiny—an inch or more across. Bush varieties take up little room and are especially adaptable for the small garden; running varieties need plenty of room for the vines to ramble over the ground. They may, like pumpkins, be planted among the corn, allowing 8 to 12 ft. of space for each group or hill. See cultural directions on next page.

*Fordhook Zucchini Improved Summer Squash*

*Royal Acorn*

## Summer and Winter Squash

Fruits may be used before the skin hardens, but the quality will be better if they are allowed to form a hard shell; splendid for winter storage. Fine grained, sweet, tender flesh. They are of the "runner" or vining type of growth; allow plants space to develop.

**1021 Royal Acorn ©** 82 days. A family-size Table Queen, with acorn-shaped fruits, 7½ in. long, 6 in. across, dull dark green in color, turning dull orange after a period of storage. Flesh is up to 1½ in. thick, dry and sweet, with baking quality as good as the smaller Table Queen. The keeping quality is excellent. Fruits may be used for boiling when immature, but for the best quality they should be allowed to develop until the shell is hard. Royal Acorn overcomes the chief objection to the extremely popular Acorn or Table Queen being so small, one fruit furnishing only two individual servings while one Royal Acorn squash will provide several servings. Vines are vigorous, productive, with large leaves. A top-notch squash for summer and winter. **Pkt. 15¢; oz. 45¢; ¼ lb. \$1.50**

**1011 Acorn or Table Queen** 85 days. Also known as **Des Moines**. Acorn-shaped, 5 in. long and 4 in. thick; deeply ribbed, dark green skin and thick orange flesh that cooks dry and sweet. Baked halves are popular for individual servings. Good keepers. **Pkt. 10¢; oz. 35¢; ¼ lb. 85¢**

**1032 Fordhook Vine** 85 days. A most delicious squash of oblong shape, 8 to 10 in. long and 3 in. thick, with creamy white smooth skin and thick straw-yellow sweet, dry flesh. **Pkt. 15¢; oz. 40¢; ¼ lb. \$1.10**

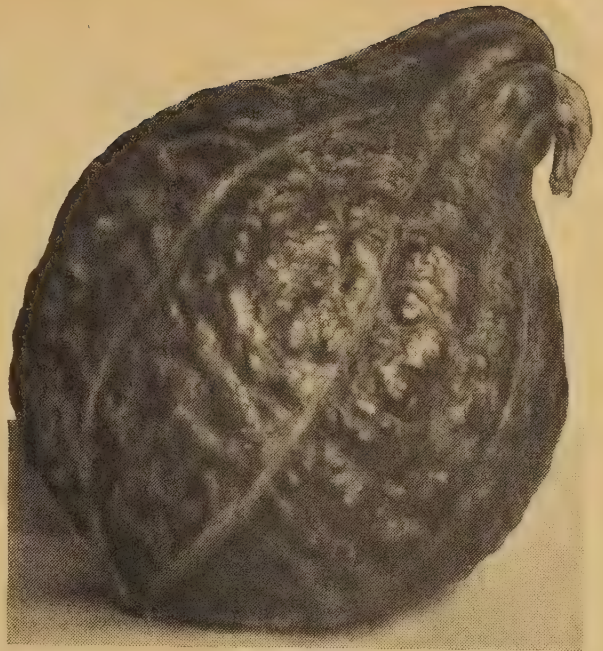

# Winter SQUASH

These produce large hard-shelled fruits which are grown to full size and may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. They keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F. The squashes must be kept dry at all times.

## 1038 True Hubbard —Widely used

115 days. ## How to Grow SQUASH

**Summer Squash.** Sow seed after all danger of frost has passed, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 4 of the strongest plants remain in a group; running varieties allow 3 plants to a group. A pkt. will plant 10 groups; an oz. 50 groups.

**Winter Squash.** Sow seed in the same way as given above for the running varieties of summer squash. A pkt. will plant 8 groups; 1 oz. 30 groups or so-called "hills." All varieties of squash grow best in a fertile, deep soil.

# Burpee's SWISS CHARD

*Burpee's Rhubarb Chard*

**"Cut and Come Again" vitamin-rich, crisp leaves; stands hot weather; abundant, continuous yielder**

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by stripping or removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced.

## 153 Burpee's Rhubarb Chard ©

60 days. A Swiss Chard that looks like rhubarb. The leaf-stalks, considered by many as the most delicious part of the chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere. You will enjoy the different, tasty, delicious flavor of Burpee's rhubarb chard. Whether you cook the leaf-stalks alone, use only the leaves, or cook both together, you will find a sweetness you never knew existed in a leafy vegetable. Plants are so beautiful they may be used in flower borders. Leaves and stalks are nice in flower arrangements; they keep fresh for a long time in water.

# Burpee's New Vegetable **TAMPALA**

**BETTER THAN SPINACH**

**STANDS HOT WEATHER**

*A pleasing change from  
all other "greens"*

*Has more flavor, more body  
and more food value than  
spinach or chard*

*Burpee's Fordhook  
Tampala*

Tampala, as a cooked, canned or quickly frozen green, is, in the opinion of many, far superior to spinach or Swiss chard. Its color is more appetizing, its flavor more delicious, shrinks very little, holds its color better and requires less cleaning and washing when preparing the leaves because they are smooth, not savoyed.

Tampala is a so-called hot-weather plant doing best when days are long. Seed, then, should not be sown until the ground has become warm. Within 6 to 8 weeks from sowing, Tampala is ready to use when the entire plants make the most delicious "greens", either eaten raw as a salad or cooked as you would spinach.

For a continuous supply of the most tender leaves, make several successive sowings 10 days to 2 weeks apart and use young plants when 6 to 10 in. tall. However, a plant may be left every 2 ft. and leaves picked as they mature or 4 to 5 in. tips of each branch may be quickly gathered instead of picking individual leaves. These young stem tips and leaves may be cooked together, but for the best eating, we suggest that you separate stems and leaves.

So tender are the leaves that they require only 5 minutes to cook with just the water that clings to them when washed. Stems are cooked like asparagus for 8 to 10 minutes, or a little longer, depending on size; they have a flavor suggestive of artichokes.

## **1375 Burpee's Tampala**

First offered by us in 1944 as a delicious green vegetable, the leaves of which are cooked, prepared and served like spinach but is better in many respects.

## **1376 Burpee's Red Tampala**

Our second selection offered in 1945 and equal in all respects to Burpee's Tampala, listed above, but instead of the leaves being green they are variegated green and red, the red extending out along the veins of the dark green leaves whose underside also is red. When cooked, prepared, and served like spinach it is most delicious.

The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, thus forming a dense mass of foliage which protects the fruit from sun-scald.

### Sizes and weights of tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables, as well as tomatoes.

Well adapted to the Midwest, California, Texas and elsewhere. Valuable for the home garden and early market. Of good quality and flavor.

Pkt. 15¢;  $\frac{1}{2}$  oz. 50¢; oz. 90¢;  $\frac{1}{4}$  lb. \$2.60

## How to Grow TOMATOES

Sow seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past. Where summers are long, seed may be sown directly outdoors when soil and weather get warm. When plants are large enough to transplant, set them where they are to remain; such plants will come into bearing later than those started earlier indoors or in a hotbed. A pkt. will produce about 200 plants; 1 oz. 2000. Days to maturity are from field setting of the plants until first usable fruits are ready.

## 1126C Stokesdale, Certified

70 days. Second-early to midseason tomato suited for home use, market and canning. Fruits are smooth, solid, deep round, bright scarlet throughout, medium sized and of fine quality. Plant is of vigorous, semi-spreading, open habit and a heavy yielder.

81 days. Grown from the same stock seed and under the same conditions as the certified but crop was not inspected for certification.

Pkt. 10¢;  $\frac{1}{2}$  oz. 40¢; oz. 75¢;  $\frac{1}{4}$  lb. \$2.25

## 1124C Valiant, Certified

65 days. An early, large-fruited variety which, because of its size and heavy yielding ability over a long period is gaining popularity for both home and market use. Plant is vigorous, medium in size, spreading and somewhat open habit of growth. The red fruits are medium large, deep globular, meaty, much superior to the old extra-early Earliana in quality. Highly recommended as profitable tomato for the early market. Used also successfully for forcing.

Pkt. 15¢;  $\frac{1}{2}$  oz. 50¢; oz. 90¢;  $\frac{1}{4}$  lb. \$2.60

**1146 San Marzano** 70 days. Highly productive and extensively grown for canning whole, for puree and making "tomato paste." ## Pink Fruited Tomatoes

### 1085 Sweetmeat — *Wilt-resistant*

66 days. Semi-globular in shape, weighing 5 ozs. and more; ripen evenly throughout and are quite free from cracking. Heavy vines give ample protection to the fruit. Flesh is solid, fine grained and of the most delicious flavor. Sweetmeat fills a definite place as a wilt-resistant, uniformly colored pink of second-early season.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.60

Burpee's  
Globe

### 1092 Burpee's Globe — *Extra choice*

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large size, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Excellent for home and market garden where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking as well as greenhouse forcing.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.60

### 1114 True Giant Ponderosa

83 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep and somewhat flattened. Persons who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor. Essentially a home garden tomato although it finds ready sale on local markets.

Pkt. 15¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$3.25

### 1091 Oxheart — *Extra large, deep fruits*

86 days. One of the largest tomatoes ever introduced, some weigh as much as 2 lbs. each. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small seed cavities with few seeds. Primarily a home garden variety but readily salable on local markets and roadside stands.

Pkt. 15¢; ½ oz. 75¢; oz. \$1.40; ¼ lb. \$4.25

Mulching tomato plants with a heavy layer of straw to retain soil moisture usually results in larger yields over a longer period of time, cleaner fruits, less cracking and less loss from blossom-end rot; it keeps down weeds, too.
